Introduction

The platform

Praisindo WMS / IMS is a single platform for the two sides of the Indonesian investment business: the bank or selling agent that distributes investment products to its customers and manages their wealth, and the investment manager that runs mutual funds and discretionary mandates.

The platform is organised in three solution systems on one Core Platform Foundation. The Transfer Agency System handles investors and customers: their accounts, transactions, holdings and servicing. The Wealth Management System manages a banking client's portfolio and wealth relationship. The Fund Management System manages funds and mandates through their operating lifecycle, from investment policy and dealing to valuation, NAV, accounting and the daily close.

Regulatory controls are part of the processes they govern. Investors are profiled and screened before they transact, suitability is decided at each order, restrictions stop activity at the point of capture, suspicious activity is reported to PPATK, and the POJK limits on collective investment schemes are configured as investment policy rules.

Each deployment presents the platform in the terminology of its business. The same capability is named Customers in a bank and Investors in an investment manager, Orders or Transaction Blotter, Investment Registry or Unit Holders and Balances.

Built into every module

Configurable maker-checker

Around sixty business actions can each be applied directly or require a second person, configured per institution and kept as versions.

Append-only audit

Each change records who, when, why, before and after, and the configuration in force. Records are corrected by reversal, not edited.

One source for each figure

Worklists, dashboards and reports count from the record that owns the figure, so screens cannot disagree.

Explained readiness

Each blocker states what is wrong, who owns it and where to resolve it, from the same rules that enforce it.

Versioned configuration

Policies, suitability rules, tax rules, charts of accounts and posting rules change as new versions from an effective date.

Stated integration status

Exchanges with outside systems follow their real message structures. Where a connection is simulated in this version, the module states it.

Introduction

Product architecture

The platform is described at five levels. Each module belongs to the Core Platform Foundation or to one solution system, and each edition provides a set of solution systems on the foundation.

Level 1
Core Platform Foundation
The shared platform every deployment runs on: work management, party master, organisation and access, prices, configuration, approvals and audit, integration and compliance oversight.

Level 2
Edition
The commercial package for a type of institution: Banking, Asset Management or Full Service. Each edition provides a set of solution systems on the foundation.

Level 3
Solution System
A complete business system an institution operates: Transfer Agency, Wealth Management or Fund Management. Solution systems are implemented individually or together.

Level 4
Module
A self-contained business function within a solution system, with a stable code, such as TA-06 Unit Registry or FM-14 NAV and Custodian Reconciliation.

Level 5
Capability
An individual function a module performs, such as registering a unit transfer on inheritance or signing off a shadow NAV.

Foundation and solution systems

Core Platform Foundation

The shared platform every edition and solution system runs on.

9 modules, 81 capabilities

Included in every edition and every deployment.

Transfer Agency System

Investor and customer accounts, transactions, holdings and servicing.

16 modules, 139 capabilities

Implemented with or without the Wealth Management or Fund Management System.

Wealth Management System

The ongoing management of a banking client's portfolio and wealth relationship.

8 modules, 51 capabilities

Part of the Banking and Full Service Editions; scoped with or without the Transfer Agency System.

Fund Management System

Funds, mandates and investment portfolios through their operating lifecycle.

18 modules, 166 capabilities

Part of the Asset Management and Full Service Editions; implemented with or without the Transfer Agency System.

Introduction

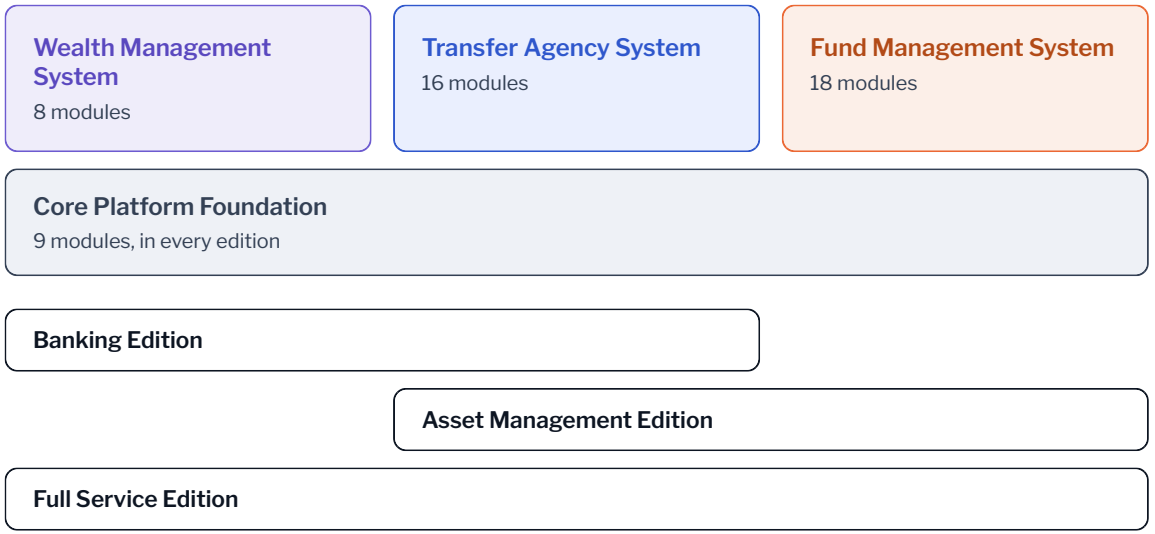

Editions and solution systems

An institution implements the solution systems its operating model requires, and not necessarily every system in its edition.

An asset manager whose investor registry and transfer agency functions are provided by another platform or service provider can implement the Fund Management System alone; fund subscriptions and redemptions are then taken from the transfer agent's dealing file.

A bank whose requirement is investment product distribution and order processing can implement the Transfer Agency System without the Wealth Management System.

A Full Service institution can deploy any combination of the three solution systems according to how its banking and investment management businesses operate.

Each edition provides the solution systems above its bar, on the Core Platform Foundation. The Transfer Agency System has a banking and an asset management implementation.

Edition

Banking Edition

For banks and wealth management institutions that distribute investment products and manage client wealth.

The Banking Edition provides the Core Platform Foundation with two solution systems. The Transfer Agency System, in its banking implementation, is the distribution and order processing layer for the bank's investment product shelf. The Wealth Management System manages each client's portfolio and wealth relationship.

The two systems are modular. A bank may implement the Transfer Agency System for investment product order processing without the full Wealth Management System.

Who it is for

Banks acting as selling agents (APERD), private and priority banking units, and wealth management institutions.

Deployment options

- Transfer Agency System only: investment product distribution and order processing.
- Transfer Agency and Wealth Management Systems: distribution with advisory and client wealth management.

30 modules and 242 capabilities across 2 solution systems and the foundation.

Core Platform Foundation

9 modules

FN-01 Workspace and Work Management, FN-02 Party and Counterparty Master, FN-03 Institution, Organisation and Access, FN-04 Prices and Market Data, FN-05 Reference Data, Fees and Taxes, FN-06 Workflow, Approvals and Audit, FN-07 Integration Management, FN-08 Compliance Oversight and Incidents, FN-09 Report Catalogue

Wealth Management System

8 modules

WM-01 Relationship Book Management, WM-02 Client Wealth and Portfolio Analytics, WM-03 Goals and Financial Planning, WM-04 Client Statements and Reporting, WM-05 Group Wealth, WM-06 Investment Policy Statements and Monitoring, WM-07 Model Portfolios, WM-08 Benchmarks

Edition

Asset Management Edition

For investment managers and asset management companies.

The Asset Management Edition provides the Core Platform Foundation with two solution systems. The Transfer Agency System, in its asset management implementation, is the transfer agency of the manager's own funds, including the Unit Registry. The Fund Management System manages funds and mandates from set-up to the daily close.

The two systems are modular. A manager whose transfer agency is provided elsewhere may implement the Fund Management System alone.

Who it is for

Investment managers (Manajer Investasi) operating KIK mutual funds and KPD discretionary mandates.

Deployment options

- Fund Management System only: portfolio management, dealing, valuation, NAV, reconciliation and accounting, with investor dealing received from an external transfer agent.
- Fund Management and Transfer Agency Systems: the fund book together with the manager's own Unit Registry and investor dealing.

35 modules and 324 capabilities across 2 solution systems and the foundation.

Core Platform Foundation

9 modules

FN-01 Workspace and Work Management, FN-02 Party and Counterparty Master, FN-03 Institution, Organisation and Access, FN-04 Prices and Market Data, FN-05 Reference Data, Fees and Taxes, FN-06 Workflow, Approvals and Audit, FN-07 Integration Management, FN-08 Compliance Oversight and Incidents, FN-09 Report Catalogue

Edition

Full Service Edition

The combined institutional platform for groups with banking and investment management businesses.

The Full Service Edition combines the Banking and Asset Management Editions: the Core Platform Foundation with the Transfer Agency System in both implementations, the Wealth Management System and the Fund Management System.

It is a commercial package rather than a separate architecture. Each business sees the platform in its own terminology, and the institution deploys the combination of solution systems its operating model requires.

Who it is for

Financial groups operating both a distribution and advisory business and an investment management business.

Deployment options

- Any combination of the Transfer Agency, Wealth Management and Fund Management Systems.
- The same approval, audit and compliance framework in each business.

51 modules and 437 capabilities across 3 solution systems and the foundation.

Core Platform Foundation
9 modules

Every module of the Core Platform Foundation, listed from page 20.

Transfer Agency System
Both implementations, 16 modules

Every module of the Transfer Agency System, listed from page 47.

Wealth Management System
8 modules

Every module of the Wealth Management System, listed from page 94.

Fund Management System
18 modules

Every module of the Fund Management System, listed from page 115.

Catalogue

Product and Instrument Universe

One catalogue of every product and instrument the platform holds, prices and transacts.

Catalogue kinds	Asset class families	Fund dealing patterns	Valuation methods	Security master sources
12	**7**	**3**	**4**	**IDX, PHEI**
Plus cash, held for each portfolio	Money market to insurance	Exchange, quote and deal, placement	Last price, clean plus accrued, principal plus accrued, face value	Term import simulated in this version

Every product and instrument exists once on the platform, in a single catalogue both lines of business read. A government bond a fund holds and the same bond a bank sells to its customers are one record, with one set of terms, one price history and one set of servicing events.

The catalogue has two masters. The instrument master holds deposit programmes, government and corporate debt, shares, rights, warrants, options, exchange traded funds and structured products. The managed product master holds the mutual funds and discretionary mandates an investment manager sets up and a bank distributes.

What differs by line of business is who transacts each kind and how. A bank's customers subscribe to funds, bonds, ETFs, deposits and structured products through the Transfer Agency System. A manager's investors subscribe to its own funds. The Fund Management System deals the securities and placements in each fund's book, and manufactures the funds and mandates themselves.

Who transacts and manages what

Bank customers

Transfer Agency System, Banking implementation

Time deposits, Government securities, Corporate bonds and sukuk, Exchange traded funds, Gold exchange traded funds, Mutual funds (KIK), Discretionary mandates (KPD) (shelf listing), Structured products, Bancassurance (shelf listing)

Product and Instrument Universe

Instrument profiles

The terms the platform holds for each kind, how it is valued, and how each side of the business transacts it.

Time deposits

Money market

Deposit programmes and placements; placement records also distinguish short-term placements and certificates of deposit.

Terms held	Rate board by tenor, board or negotiated rate; minimum amount and increment; day count; interest at maturity, monthly or quarterly; permitted maturity instructions and rollover; early break rule, notice and penalty; deposit insurance (LPS) limit; bilyet number and rollover chain.
Valued at	Principal plus accrued interest
Bank customers	Placement and withdrawal from the order ticket; maturity instruction, rollover or early break. TA-12.
Funds and mandates	Placement with a bank at an agreed rate and tenor; maturity instructions, rollover and early break. FM-09.

Government securities

Fixed income

Fixed and floating rate bonds, sukuk, treasury bills and retail series such as ORI and SR issued by the Republic of Indonesia.

Terms held	Series code, such as FR, PBS, ORI or SR; fixed, floating or zero coupon; reference rate, spread, floor and cap; coupon frequency, calendar and day count; offering window, allotment and issue date for retail series; sukuk structure, such as Ijarah; bond pricing agency reference.
Valued at	Clean price plus accrued interest, from the bond pricing agency
Bank customers	Primary subscription in the offering window; purchase and sale on a dealer's quote. TA-10.
Funds and mandates	Quote and deal: nominal at a clean price per 100 with accrued interest on top. FM-08.

Corporate bonds and sukuk

Fixed income

Fixed and floating rate corporate bonds, corporate sukuk and medium term notes.

Terms held	Issuer, rating, rating agency and rating date; fixed, floating or zero coupon, with the coupon calendar; callable and amortising features; issue size and amount outstanding; listing and pricing agency reference.
Valued at	Clean price plus accrued interest, from the bond pricing agency
Bank customers	Purchase and sale on a dealer's quote, and primary subscription where an offering is open. TA-10.
Funds and mandates	Quote and deal: nominal at a clean price per 100 with accrued interest on top. FM-08.

Common shares

Equity

Ordinary shares listed on the exchange, conventional and sharia.

Terms held	Exchange, board, sector and industry; index memberships, such as LQ45 or IDX30; shares per lot; free float and shares outstanding; average daily volume; market data symbol.
Valued at	Last traded price from the market feed
Funds and mandates	Exchange execution through a broker in whole lots, at market or limit, as a single, VWAP, TWAP or sliced order. FM-08.

Preferred shares

Equity

Listed shares carrying a stated dividend ahead of ordinary shares.

Terms held	Par value; preferred dividend rate; cumulative and convertible features.
Valued at	Last traded price from the market feed
Funds and mandates	Exchange execution through a broker, as for common shares. FM-08.

Rights and warrants

Equity

Pre-emptive rights from a rights issue, and warrants to subscribe for shares.

Terms held	Underlying share; entitlement ratio; exercise price and exercise window; trading window for the entitlement; expiry.
Valued at	Last traded price from the market feed
Funds and mandates	Exchange execution; rights arising from a rights issue are elected and booked as corporate actions. FM-08.

Listed options

Equity

Listed equity call and put options.

Terms held	Underlying share; call or put; European or American style; strike price and contract size; expiry; physical or cash settlement.
Valued at	Last traded price from the market feed
Funds and mandates	Registered with their contract terms and dealt through exchange execution. FM-08.

Exchange traded funds

Listed funds

Index ETFs listed on the exchange, conventional and sharia.

Terms held	Manager and listing; board; lot size; average daily volume and fund size.
Valued at	Last traded price from the market feed
Bank customers	Purchase and sale in whole lots at the last price, with brokerage and final tax on the proceeds of a sale. TA-10.
Funds and mandates	Exchange execution through a broker, as for shares. FM-08.

Gold exchange traded funds

Listed funds

ETFs backed by allocated physical gold; the client holds units of the fund, not the metal.

Terms held	Bullion custodian and storage; purity and the standard it is certified under; electronic gold receipt code and ISIN; governing regulation and sharia basis; benchmark and physical redemption terms; published management fee.
Valued at	Last traded price from the market feed
Bank customers	Purchase and sale in whole lots, as for other ETFs. TA-10.
Funds and mandates	Exchange execution through a broker, as for shares. FM-08.

Mutual funds (KIK)

Managed funds and mandates

Money market, fixed income, balanced, equity, index and sharia funds, in rupiah or another currency such as US dollars.

Terms held	Share classes with their own fees, minimums and income treatment; dealing frequency, cut-off, pricing basis and settlement cycles; subscription, redemption, switching and management fees; investment policy and benchmark; custodian bank and registrar; product risk level for suitability.
Valued at	Published NAV per unit of each share class
Bank customers	Subscription, redemption and switching of distributed funds at the NAV of the dealing date. TA-10.
Fund investors	Subscription, redemption and switching in the manager's own funds; units allotted at the dealing date NAV. TA-07.
Funds and mandates	Set up, released, invested, valued and accounted for as a fund with its own book and NAV. FM-01.

Discretionary mandates (KPD)

Managed funds and mandates

Portfolios managed for a single client under a mandate agreement.

Terms held	Client and agreement number; agreement expiry and initial funding; investment policy and benchmark; management, custodian and incentive fees.
Valued at	Valued position by position, as a fund book
Bank customers	Listed on the product shelf with its manager and terms; not dealt through the order ticket. TA-09.
Funds and mandates	Set up and managed as a portfolio book with its own investment policy. FM-01.

Structured products

Structured products

Market-linked principal protected deposits, range accrual deposits, equity-linked deposits and dual currency investments.

Terms held	Payoff: one-touch, no-touch, double touch, digital, range accrual, participation or dual currency; offer window, trade, fixing, payment and maturity dates; spot, barriers or strike, minimum and bonus return, participation or cap; minimum and maximum issue size and order limits; target segments, allocation rule and early termination terms.
Valued at	Structured product quotes on the price workbench
Bank customers	Subscription during the offer window; withdrawal before the trade date; early termination at the unwind cost. TA-11.
Note	A structured product is a distribution product; a fund's book deals the underlying paper rather than the note.

Bancassurance

Insurance

Unit-linked insurance products held on a governed shelf register.

Terms held	Product register with maker-checker; protection family in model portfolios and client wealth observations; insurer codes in the external mapping register.
Valued at	Positions are not held on the platform in this version
Bank customers	Listed on the product shelf; product set-up and dealing are planned for a later version. TA-09.

The Core Platform Foundation contains only what every solution system requires in order to operate: the working environment, the master of parties and counterparties, the institution's organisation and access roles, prices and FX rates, reference data, fees and taxes, the approval and audit framework, integration management, compliance oversight and the report catalogue.

Capabilities that are technically shared but serve only some solution systems, such as investor onboarding, suitability or benchmarks, are described under the systems that use them.

Included in every edition and every deployment.

Modules

Code	Module	What it does	Screens	Page
FN-01	**Workspace and Work Management**	Home, a personal worklist, tabbed working, navigation search and the system clock.	2	22
FN-02	**Party and Counterparty Master**	One governed record per customer, investor, mandate client, counterparty and group.	3	25
FN-03	**Institution, Organisation and Access**	Institution profile and licences, group entities, organisation structure, roles and scenario environments.	4	29
FN-04	**Prices and Market Data**	Every price, rate and NAV the platform values at, with source, quality and history.	1	32
FN-05	**Reference Data, Fees and Taxes**	Governed code lists, the fee catalogue, versioned tax rules and the operating configuration in force.	3	34
FN-06	**Workflow, Approvals and Audit**	Configurable maker-checker on each governed action, versioned approval policies and an append-only audit trail.	2	36

Code	Module	What it does	Screens	Page
FN-07	**Integration Management**	Connector configuration, governed external code mappings with coverage checks, and integration activity.	3	39
FN-08	**Compliance Oversight and Incidents**	The compliance dashboard across every system, the oversight sweep and the incident register.	2	42
FN-09	**Report Catalogue**	One catalogue of the reports each deployment includes, with the source of every figure.	1	45

FN-01 Core Platform Foundation

Workspace and Work Management

The working environment every user of every solution system shares. It shows what is waiting on the user and where, keeps several records open side by side, and reaches any screen by its name or its local term.

Business use

Used to take in and prioritise daily work, follow up approvals and returned work, and monitor operations from a single start page.

Screens

Home
Workspace › My Workspace

My Work
Workspace › My Workspace

Included in
Every edition

Capabilities	Screens	Workflows
11	**2**	**1**

Capabilities

11 capabilities

Capability	What it does
Home	
Needs attention	Counts what is waiting, marks urgent items and links each to the screen that owns it: reviews, returned requests, onboarding decisions, investment accounts awaiting S-INVEST, unassigned clients and compliance items past their service level.
Investment desk	Shows an asset manager its assets under management, today's change, close blockers, business date readiness, orders needing action, limit breaches, fund performance and recent activity.
Area directory	Lists each deployed product area and its capability groups, one step from Home.
My Work	
Personal worklist	Lists every record waiting on the user, grouped into approvals to decide, work returned, onboarding, provisional parties, investment accounts, close blockers, integration exceptions, drafts and compliance deadlines.
Stale request warning	Flags an approval whose record changed after it was submitted, before it is decided.

Capability	What it does
Role-aware queues	Shows a maker the work returned to them and a checker the work awaiting a decision. Each queue appears only where the deployment uses it.
Working environment	
Workspace tabs	Keeps up to twelve records open as tabs that hold their place, filters and unsaved forms, with keyboard shortcuts to switch, close and reopen.
Unsaved work guard	Asks for confirmation before a tab with unsaved changes is left or closed.
Navigation search	Finds any screen with Ctrl+K by name, alias or local term, including Indonesian and legacy names, in the deployment's own wording.
System clock	Shows the time in Western Indonesia Time (WIB), the zone every cut-off is stated in.
Light and dark themes	Offers both themes throughout, chosen by each user.

Workflows

A working day

1. Open Home to see what needs attention across the institution.
2. Work the personal queue in My Work, each item opening its record in a tab.
3. Decide approvals, complete returned work and clear deadlines.

Integrations and dependencies

Works with	How
FN-06 Workflow, Approvals and Audit Core Platform Foundation	Receives the approvals waiting and returned from the maker-checker framework.
TA-01 Onboarding and Investment Accounts Transfer Agency System	Receives onboarding cases and investment account requests into the worklist.
FM-16 Daily Readiness and Close Fund Management System	Shows close blockers from the Fund Management System on Home and in My Work.
FN-08 Compliance Oversight and Incidents Core Platform Foundation	Receives compliance deadlines into the worklist.

By line of business

- A Banking deployment opens on a register-work Home of counts and links, and an Asset Management deployment opens on the investment desk.

FN-02 Core Platform Foundation

Party and Counterparty Master

Holds the single master record of every person and organisation the institution deals with. Investors and customers, discretionary mandate clients, custodian banks, brokers, pricing agencies, registrars and deposit counterparties are each held once, with identity, tax, KYC, relationships and compliance standing. Every change is proposed, reviewed and kept as a version.

Business use

Used to manage customer, investor, counterparty and service provider master data, prevent duplicates, manage household, family and corporate groups, and classify parties for FATCA and CRS.

Screens

Included in
Every edition

Capabilities	Screens	Workflows
14	**4**	**1**

Capabilities

14 capabilities

Capability	What it does
Parties	
Party register	Searches parties by name, code or any identifier, with the columns and filters of the line of business: segment, branch and relationship manager for a bank, and classification, SID, channel, selling agent and AML risk for an asset manager.
Party record	Shows a party's overview, identity, contacts and addresses, tax and residency, KYC, compliance, groups, servicing, documents and consents, onboarding, bank accounts, investment accounts, holdings, activity and version history.
Identifier validation	Checks CIF, NIK, NPWP, SID, passport, KITAS and KITAP, NITKU, NIB, LEI and registration numbers for format on entry.
Duplicate control	Refuses a repeated primary identifier and requires a similar name with the same birth or incorporation date to be acknowledged. Records are never merged automatically.

Capability	What it does
Governed changes	Routes changes to identity, segment, classification, status, identifiers, primary contacts and address as one proposed package, reviewed field by field.
Version history	Records every proposal and its outcome, with an attribute-level comparison of old and new values.
Tax and residency	Holds FATCA and CRS status, self-certification, US indicia, withholding classification and tax residencies with TIN or the reason for none.
Core banking link	
Core banking synchronisation	Retrieves a customer batch, shows each record as new, changed, unchanged, possible duplicate or rejected with a field-level difference, and applies the selection. The core banking feed is simulated in this version.
Provisional parties	Registers a person core banking does not yet hold and links the CIF later without losing history.
Source-owned fields	Keeps fields owned by core banking read-only on synchronised records.
Counterparties and groups	
Business partners	Holds custodian banks, brokers, pricing agencies, market data providers, registrars, deposit counterparties, auditors and issuers, with roles held in a configurable list.
Partner record	Shows the funds held in custody, placements with the counterparty and recent instructions routed to the broker.
Groups	Holds households, family groups, corporate groups and Super-CIF structures with member roles and a head. Removed members are end-dated.
Relationship network	Shows an interactive two-level graph of groups, relationships, beneficial owners and authorised persons around a party.

Workflows

Changing a party record

1. Propose the changes as one package with a reason.
2. A second person reviews each field against the current record.
3. On approval the record updates and a new version is kept.

Integrations and dependencies

Works with	How
TA-01 Onboarding and Investment Accounts Transfer Agency System	Receives the investor and customer records that Transfer Agency onboarding completes and activates.
WM-05 Group Wealth Wealth Management System	Supplies groups, which the Wealth Management System reads as consolidated portfolios.
FM-01 Funds and Mandates Fund Management System	Supplies the Fund Management System with custodian banks from partners and mandate clients from parties.
FM-08 Trade Order Management Fund Management System	Holds trade counterparties and brokers as business partners.
Core banking Outside system	Receives the customer directory, customer batches, bank accounts and balances. The exchange is simulated in this version.

By line of business

- Banking calls parties customers, keys them on the core banking CIF and supports provisional parties.
- Asset Management calls them investors, registers them directly and captures bank accounts on the record.

FN-03 Core Platform Foundation

Institution, Organisation and Access

Holds the institution's own identity and structure: legal and registration details, regulatory licences, group companies, logo and the organisation of branches, units or teams. It also sets out the governance roles people work under and provides prepared scenario environments for training and demonstration.

Business use

Used to maintain the institution's master data, regulatory licence register and organisation structure, set out segregation of duties, and provide training and demonstration environments.

Screens

Every edition

Capabilities	Screens	Workflows
10	5	0

Capabilities

10 capabilities

Capability	What it does
Institution	
Institution profile	Holds the legal and display names, NPWP, NIB, LEI, SWIFT BIC, listing, address and contacts, edited by administrators only and audited field by field.
Licences	Records licences held from OJK, BI, KSEI, IDX and others, with number, issue date and status.
Logo	Holds the institution's logo, printed on client documents such as the consolidated statement.
Legal entities	Records subsidiaries, associates and affiliates with ownership, activity, regulator and licence.

Capability	What it does
Organisation	
Branches, units and teams	Holds head office, regions, branches and units, or head office and teams, with parent rules, unique codes and no cycles. A node cannot close while people or active children sit under it.
HR master synchronisation	Retrieves organisation changes, previews them and applies the selection. The HR feed is simulated in this version.
Organisation view	Shows the organisation tree with the number of people placed at each node.
Access and environments	
Role model	Sets out the super user, maker and checker roles, with what each may create, decide and see on every governed screen.
User directory	Lists the accounts that hold each role, with organisation, branch and data scope.
Scenario environments	Loads a prepared Banking or Asset Management scenario, advances it through the stages of a business day and resets it.

Integrations and dependencies

Works with	How
FN-06 Workflow, Approvals and Audit Core Platform Foundation	Supplies the roles that decide who may make and who may check each governed change.
TA-13 Sales Force and Relationship Coverage Transfer Agency System	Provides the branches and units at which relationship managers are placed.
WM-04 Client Statements and Reporting Wealth Management System	Supplies the logo that brands the consolidated client statement.
HR master Outside system	Synchronises organisation and staff from the HR master. The exchange is simulated in this version.

By line of business

- Banking runs a branch network (Branches and Units), and Asset Management runs functional teams (Organization and Teams).

FN-04 Core Platform Foundation

Prices and Market Data

Holds each price the platform values holdings at, whichever system uses it: orders priced by the Transfer Agency System, client portfolios valued by the Wealth Management System and fund books valued by the Fund Management System. Each price carries its source, quality and history, and FX rates are approved before use.

Business use	Used to capture prices and rates, control price quality, publish FX rates and override prices.
Screen	**Prices and Rates** Products and Offerings › Prices and Market Data

Included in
Every edition

Capabilities	Screens	Workflows
6	1	1

Capabilities

6 capabilities

Capability	What it does
Price workbench	Shows FX rates, shares and listed funds, bonds and sukuk with yield, structured product quotes and money market rates, filtered by quality: fresh, stale, missing or overridden.
Price lineage	Shows each price's source, source system, external reference, received time, superseded value and override reason, with its recent observations.
Equity price refresh	Retrieves closing prices for listed equities and ETFs from the market data service. A symbol that does not answer keeps its last price.
Price override	Replaces a price with a mandatory reason, kept on its timeline.
FX rates	Holds USD, EUR and SGD against the rupiah with twenty days of history. A retrieved rate only prefills the form, and every rate is approved by a second person.
Exceptions	Lists stale or missing prices, rates and NAVs at the top of the workbench.

Workflows

Publishing FX rates

1. Retrieve the rates from the market data service or enter them.
2. Submit them for approval.
3. On approval the rates value every foreign currency holding.

Integrations and dependencies

Works with	How
TA-10 Investment Order Processing Transfer Agency System	Supplies the recorded NAVs and prices at which orders are priced.
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Supplies the prices and FX rates client portfolios are valued at.
FM-13 Daily Valuation and Accruals Fund Management System	Supplies the accepted prices and FX rates the daily valuation reads.
Market data service Outside system	Retrieves public equity quotes and FX rates on request. There is no Bloomberg or Refinitiv connection.

By line of business

- Banking also records the published NAVs of the third-party funds it distributes, under maker-checker. An asset manager strikes its own NAV in the Fund Management System.

FN-05 Core Platform Foundation

Reference Data, Fees and Taxes

Holds the shared lists, fees and tax rules every solution system reads, each changed under control and kept as versions. It also gives a single view of the operating configuration the platform is running on.

Business use

Used to manage reference data, set up fees and charges, maintain tax treatment and review operating parameters.

Screens

Reference Data
Settings and Configuration › Business Configuration

Fees, Taxes and Commissions
Settings and Configuration › Business Configuration

Calendars, Cut-offs and Settlement
Settings and Configuration › Business Configuration

Included in
Every edition

Capabilities	Screens	Workflows
8	3	1

Capabilities

8 capabilities

Capability	What it does
Reference data	
Code lists	Holds every shared list in one register, scoped to system, institution or branch, with entries ordered, activated and deactivated.
Dependent lists	Scopes one list by another, such as range codes by fee type.
Custom attributes	Adds typed text, number, date or yes-no fields that every entry must carry, such as ISO and core banking codes on currencies.
Fees and taxes	
Fee catalogue	Holds management and transaction fees by product type. Subscription, redemption and transfer components carry a basis, bands and holding age, and management terms carry a day count and tiers.
Tax rules	Holds tax rules by jurisdiction, income type and instrument, with treatment, rate, withholding party and regulation reference. Income types cover dividends, coupons, sukuk profit, deposit interest, sale proceeds, distributions and VAT on fees.

Capability	What it does
Tax rule versions	Supersedes a rule from an effective date when it changes, and keeps every version listed.
Fee schedules	Shows the fund fees accruing against NAV, as set up on each product.
Operating configuration	
Configuration in force	Shows the business date, base currency, valuation triggers, maximum price age, NAV tolerance, precision, valuation cut-offs per product, dealing charges, execution routing and the chart of accounts, with the policy version.

Workflows

Changing a tax rate

1. Propose the new rate with its effective date and regulation.
2. A second person approves.
3. The new version applies from its date, and the previous one remains on record.

Integrations and dependencies

Works with	How
TA-10 Investment Order Processing Transfer Agency System	Supplies the dealing fees and tax rules that order capture reads.
FM-13 Daily Valuation and Accruals Fund Management System	Supplies the fund fee schedules that accrue in the daily valuation.
FN-07 Integration Management Core Platform Foundation	Supplies the reference values that external mappings translate for outside systems.

FN-06 Core Platform Foundation

Workflow, Approvals and Audit

Decides, action by action, whether a change applies directly or requires a second person, and records everything that happens. An approval replays the original command against the current record, so nothing authoritative changes before approval, and every event keeps who, why and under which configuration.

Business use

Used to segregate duties, administer approval policies, support audit and investigation, and control configuration changes.

Screens

Workflow and Approval Policies
Settings and Configuration › Business Configuration

Audit Explorer
Settings and Configuration › Governance and Audit

Included in
Every edition

Capabilities	Screens	Workflows
12	2	1

Capabilities

12 capabilities

Capability	What it does
Maker-checker	
Governed actions	Sets each of around sixty business actions to direct or maker-checker, from party changes and orders to fees, benchmarks, suitability, mappings and reopening a locked day.
Request lifecycle	Tracks a request through draft, submission with a reason, return, revision, withdrawal, approval or rejection, with comments required where the policy says.
Review in context	Shows the checker a field-by-field difference, what approval would do now and any duplicates.
Stale protection	Blocks approval of a request as it stands when its record changed after submission.
Self-approval control	Blocks a maker from approving their own request unless the policy allows it.
Consistent screens	Presents the same Records, My Requests and Pending Approval views on every governed screen.

Capability	What it does
Policies	
Process assignments	Sets direct or maker-checker per action with a reason. A review shows what changes and how many open requests remain on the previous policy.
Template controls	Sets reason, comment, draft, withdrawal and self-approval controls, published as new versions while requests in progress keep theirs.
Deployment boundaries	Shows what the deployment allows: its processes, template kinds and locked controls.
Audit	
Audit explorer	Searches the append-only audit trail by text, domain, action and source system.
Event detail	Shows when each event happened, who acted, the record, reason, correlation reference, maker and checker, configuration in force and field-level before and after values.
Record timelines	Shows the same events on the activity tab of each record.

Workflows

Placing an action under maker-checker

1. Open the action's assignment and choose maker-checker.
2. Give the reason and review the effect on open requests.
3. Apply the change, and the assignment becomes a new version.

Integrations and dependencies

Works with	How
FN-01 Workspace and Work Management Core Platform Foundation	Sends requests waiting and returned to My Work.
FN-03 Institution, Organisation and Access Core Platform Foundation	Reads the roles that decide who may make and who may check.
FM-08 Trade Order Management Fund Management System	Maintains the trade workflow configuration of the Fund Management System.

By line of business

- Banking starts every governed action under maker-checker and locks self-approval off.
- Asset Management starts a defined set under maker-checker, may allow self-approval, and adds the trade workflow configuration.

FN-07 Core Platform Foundation

Integration Management

Configures the systems the platform exchanges data with and translates its records into the codes each system expects. Mappings are versioned and approved, missing mappings are identified before a message fails, and each exchange can be traced through the audit trail.

Business use: Used to configure interfaces, map external codes and monitor integrations.

Screens:

- **Data Sources and Integrations** — Settings and Configuration › Integration Management
- **External Mappings** — Settings and Configuration › Integration Management
- **Integration Monitoring** — Settings and Configuration › Integration Management

Included in
Every edition

Capabilities	Screens	Workflows
10	3	1

Capabilities

10 capabilities

Capability	What it does
Connections	
Data sources and integrations	Holds connector configuration with status, scope and who connected it. This version carries the Acumatica ERP general ledger connector.
Acumatica connection	Sets the tenant, company, endpoint, ledger, export scope (locked days or every posted journal), hold on export, branch per fund and account per chart account, versioned and audited.
Export history	Records each journal sent to Acumatica with its batch number or the reason it was not sent.
External mappings	
Mapping register	Holds internal values against the codes of core banking, e-SBN, KSEI S-INVEST, Murex, insurers and regulatory reporting, effective-dated and versioned.
Missing mappings	Lists the values an integration needs that have no mapping, computed from live records, with the reason each is needed.

Capability	What it does
Bulk import and export	Uploads CSV or Excel with row-by-row validation and submits only clean rows. Exports the register to CSV or Excel.
Governed changes	Routes creating, changing, correcting or ending a mapping through maker-checker, with usage showing which messages used each version.
No silent fallback	Reports a missing mapping as an error and never replaces it with the internal code.
Monitoring	
Configured connections	Lists the market feed, bond pricing agency, custodian valuation, screening, PPATK goAML, execution routes and ERP, with direction, content and last activity.
Recent activity	Shows recent prices, custodian NAVs, routed and filled orders, screening, report submissions and ERP events, each linked to the audit trail.

Workflows

Loading a new external code set

1. Download the template and complete the codes.
2. Upload it, and each row is validated and previewed.
3. Submit the clean rows for approval.
4. Confirm the missing mappings view is clear.

Integrations and dependencies

Works with	How
TA-05 External Processing and Exceptions Transfer Agency System	Supplies the mapped identifiers that outbound order messages carry.
FM-01 Funds and Mandates Fund Management System	Holds a fund's KSEI, S-INVEST and custodian codes as mappings.
FM-15 Fund Accounting and General Ledger Fund Management System	Supplies the connection and account mappings that journal export to Acumatica uses.
Acumatica ERP Outside system	Builds the export request in full. The exchange with the tenant is simulated in this version.

By line of business

- Banking deployments carry mappings for nine systems including core banking, e-SBN, Murex and insurers, and Asset Management deployments carry them for KSEI S-INVEST and regulatory reporting.

FN-08 Core Platform Foundation

Compliance Oversight and Incidents

Shows where each compliance obligation stands today, counted from the records that own it, whichever solution system raised it. It also manages operational and regulatory incidents to closure with their notifications.

Business use	Used to monitor compliance and give management information on it, manage operational and regulatory incidents, and notify regulators and stakeholders.
Screens	**Compliance Dashboard** Compliance and Risk › Oversight
	Breaches and Regulatory Incidents Compliance and Risk › Conduct and Service

Included in
Every edition

Capabilities	Screens	Workflows
7	2	1

Capabilities

7 capabilities

Capability	What it does
Dashboard	
Headline measures	Counts open AML alerts and those past service level, undecided screening hits, open cases, limit or policy breaches, open complaints and incidents with overdue notifications.
Needs a decision	Lists overdue alerts, aged hits, overdue cases and complaints, missed reporting deadlines, unowned breaches and oversight findings, each opening its record.
Grouped measures	Counts restricted parties, frozen accounts, KYC reviews due, expired risk profiles, processing exceptions and reconciliation differences.
Incidents	
Incident register	Records operational, compliance, data privacy, investment limit, regulatory reporting, financial, cyber and conduct incidents with materiality and owner.
Oversight sweep	Shows what stands outside its rule across every process today, from fund limits and client policy statements to reconciliation and trade orders, and each finding can be recorded as an incident.

Capability	What it does
Notifications	Sets due dates per audience from detection: OJK and PPATK within three working days, clients within five, and custodian bank and board within one.
Controlled closure	Closes an incident only when every action is complete, every notification sent and closure evidence recorded.

Workflows

Managing an incident

1. Record the incident, or raise it from an oversight finding.
2. Contain it and record the root cause.
3. Send each required notification by its due date.
4. Complete the remediation actions and close with evidence.

Integrations and dependencies

Works with	How
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	Receives AML, screening and restriction measures from the Transfer Agency System.
WM-06 Investment Policy Statements and Monitoring Wealth Management System	Counts clients outside their policy statements for Banking.
FM-05 Investment Compliance Monitoring Fund Management System	Counts fund limit breaches for Asset Management.
TA-05 External Processing and Exceptions Transfer Agency System	Offers processing exceptions as candidate incidents.

FN-09 Core Platform Foundation

Report Catalogue

Lists the reports the deployment includes, what each shows and where its figures come from. Reports are delivered by the solution systems that own their data and open at the current business date.

Business use	Used to find and open the reports a deployment includes.
Screen	Report Catalogue Reports › Report Access and Analysis

Included in
Every edition

Capabilities	Screens	Workflows
3	1	0

Capabilities

3 capabilities

Capability	What it does
Report catalogue	Lists every report the deployment includes, with its family, what it shows and where its figures come from. Reports outside the deployment are not offered.
TKMI report	Opens the TKMI external report in its own application.
Printing	Opens reports at the current business date with every fund in scope, to be kept by printing.

Integrations and dependencies

Works with	How
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	Lists the AML alert summary, which the Transfer Agency System delivers.
FM-17 Fund Reporting Fund Management System	Lists the fund reports, which the Fund Management System delivers.

Section 2, solution system

Transfer Agency System

Investor and customer accounts, transactions, holdings and servicing.

Modules	Screens	Capabilities	Workflows	Included in
16	40	139	16	Every edition

The Transfer Agency System is the investor and customer facing layer of the platform: onboarding and accounts, suitability, transactions from capture to settlement, the record of holdings, servicing, and the financial crime and complaint controls around them.

It is one functional umbrella with two implementations. For an asset manager it is the transfer agency of its own funds, centred on the Unit Registry. For a bank it is the distribution and order processing layer for the investment products it offers its customers, keeping the selling agent's record of their holdings. Five modules serve both implementations; the rest belong to one.

Implemented with or without the Wealth Management or Fund Management System. Earlier documentation refers to the investor registry and transfer agency functions as SIAR.

Asset Management implementation

The transfer agency of the manager's own funds: investors subscribe, redeem and switch; units are allotted and cancelled at the dealing date NAV; the Unit Registry records every unit holder and is reconciled to KSEI S-INVEST.

8 modules, of which 3 specific to this implementation

Banking implementation

The distribution and order processing layer for the bank's investment product shelf: funds, mandates, bonds, ETFs, structured products and deposits, with orders validated, approved, executed and settled, and the bank's selling agent record of customer holdings.

13 modules, of which 8 specific to this implementation

Modules

Code	Module	What it does	Screens	Page
Both implementations			5 modules	

Code	Module	What it does	Screens	Page
TA-01	**Onboarding and Investment Accounts**	Case-managed KYC and CDD onboarding through to activation, and S-INVEST investment account requests.	2	52

Code	Module	What it does	Screens	Page
TA-13	**Sales Force and Relationship Coverage**	Relationship managers and their licences, the marketing tree, client assignments and RM mutations.	5	85
TA-14	**Customer Holdings Records**	The selling agent record of customer holdings: balances, movements, transfers, adjustments and KSEI reconciliation.	5	88
TA-15	**Product Events and Entitlements**	Dividends, coupons, principal payments and maturities on customer holdings, paid through to each customer.	1	90
TA-16	**Campaigns and Referral Programs**	Governed promotion and referral campaigns with a rule-based audience and reward terms.	1	92

Transfer Agency System, product and instrument universe

Client and investor product universe

The products a bank's customers and a manager's investors can transact through the Transfer Agency System, how each is dealt and when it settles. Every order runs the same eligibility, suitability and funds checks, and settles only against evidence.

Product	Bank customers	Fund investors
Time deposits	Placement and withdrawal from the order ticket; maturity instruction, rollover or early break. Settles: same day, on the value date. TA-12	Not offered
Government securities	Primary subscription in the offering window; purchase and sale on a dealer's quote. Settles: as agreed on the deal, or the issue date for a primary subscription. TA-10	Not offered
Corporate bonds and sukuk	Purchase and sale on a dealer's quote, and primary subscription where an offering is open. Settles: as agreed on the deal. TA-10	Not offered
Exchange traded funds	Purchase and sale in whole lots at the last price, with brokerage and final tax on the proceeds of a sale. Settles: two business days. TA-10	Not offered
Gold exchange traded funds	Purchase and sale in whole lots, as for other ETFs. Settles: two business days. TA-10	Not offered
Mutual funds (KIK)	Subscription, redemption and switching of distributed funds at the NAV of the dealing date. Settles: subscriptions a day after the NAV; redemptions within seven exchange days. TA-10	Subscription, redemption and switching in the manager's own funds; units allotted at the dealing date NAV. Settles: subscriptions a day after the NAV; redemptions within seven exchange days. TA-07
Discretionary mandates (KPD)	Listed on the product shelf with its manager and terms; not dealt through the order ticket. TA-09	Not offered

Product	Bank customers	Fund investors
Structured products	Subscription during the offer window; withdrawal before the trade date; early termination at the unwind cost. Settles: two business days after the counterparty confirms. TA-11	Not offered
Bancassurance	Listed on the product shelf; product set-up and dealing are planned for a later version. TA-09	Not offered

How client products are dealt

Forward pricing for funds

Fund orders are indicated at the last published NAV and dealt at the NAV of the dealing date; orders after the 13:00 cut-off deal on the next bourse day.

Quotes for bonds

Bond orders are priced at a dealer's clean price per 100 plus accrued interest, accepted by the customer before release; retail series are subscribed in their offering window and allotted by the issuer.

Lots for listed funds

ETFs, including gold ETFs, are dealt in whole lots at the last price, with brokerage and final tax on sales.

Terms for deposits

Deposits are placed at par for a tenor from the programme's rate board, with the interest and tax fixed at placement and an instruction for maturity.

Issues for structured products

Structured products are subscribed to a dated issue in its offer window, allocated at launch and settled at maturity.

Multi-currency

Products in another currency are dealt from an account in that currency and valued in rupiah at the approved FX rate.

TA-01 | Transfer Agency System | Both implementations

Onboarding and Investment Accounts

Establishes whether an investor or customer may transact. An onboarding case collects identity, ownership, tax, due diligence, suitability, screening and documents, and shows what still blocks it. It ends in approval by a second person, which activates the party and requests its investment accounts.

Business use	Used to carry out know your customer and customer due diligence, apply enhanced due diligence to higher-risk parties, record beneficial ownership and authorised signatories, approve and activate parties, and open IFUA, AID and SubReg accounts.
Screens	**Onboarding** Stakeholder Management › Customer Lifecycle **Investment Accounts** Stakeholder Management › Customer Lifecycle

Included in
Every edition

Capabilities	Screens	Workflows
11	**2**	**1**

Capabilities

11 capabilities

Capability	What it does
Onboarding cases	
Onboarding worklist	Lists open, action required, completed and closed cases with the current step, status and a count of what is outstanding.
Guided case	Guides each case through initiation, identity, ownership and authority, tax and residency, KYC, risk profile, screening, documents and consents, distribution, investment account request and review.
Beneficial ownership	Records owners with ownership and voting percentages, control method and verification, and authorised persons with scope, signature rule, limit and expiry.
Due diligence	Records purpose, expected activity, source of funds and wealth, AML risk class and enhanced due diligence rules. A declared public office triggers a PEP review.
Screening step	Checks the party against sanctions, DTTOT, PEP and watchlists through the screening service, and each hit requires a disposition. The screening service is simulated in this version.

Capability	What it does
Documents and consents	Tracks evidence as received, verified, rejected, replaced or expired, and records privacy, e-delivery, prospectus, risk disclosure and data sharing consents.
Readiness	States for each blocker what is wrong, who owns it and how to resolve it, from the same rules the approval applies.
Case validity	Cases lapse after their validity. A closed case is never reopened, and a new case starts instead.
Investment accounts	
Account requests	Requests an IFUA for mutual funds, an AID for government bonds or a SubReg for corporate bonds, with a preview of what S-INVEST will receive.
Account lifecycle	Tracks each account as awaiting, active, rejected, frozen or closed, with resend and closure requests and the SID reported by KSEI.
Transaction readiness	Allows a party to transact once it holds an active account, a bank account to settle through and no blocking restriction.

Workflows

Onboarding a party

1. Start from the core banking directory or register a new investor.
2. Complete the case until nothing blocks it.
3. Submit the case, and a different person approves, returns or rejects it.
4. Approval activates the party and sends its investment account requests.

Integrations and dependencies

Works with	How
FN-02 Party and Counterparty Master Core Platform Foundation	Completes and activates the party record.
TA-02 Risk Profiling and Suitability Transfer Agency System	The risk profile step records a suitability assessment or a waiver.
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	Screening results are decided in the screening workbench.
KSEI S-INVEST Outside system	Sends investment account requests and receives SIDs. Replies are simulated in this version.

By line of business

- Banking links an existing core banking customer, verifies the source record and may reuse the bank's own due diligence within a year.
- Asset Management registers new investors directly, may waive the questionnaire for institutions and requires a second approver for high-risk investors.

TA-02 | Transfer Agency System | Both implementations

Risk Profiling and Suitability

Keeps each investor's risk profile current and decides, for every order, whether the product is suitable. Questionnaires, scoring, risk categories, the suitability matrix and the rules for exceptions are configured as versions and released under control.

Business use

Used to profile and reassess investor risk, decide product suitability, handle consent-based exceptions and waivers, and govern suitability rules.

Capabilities	Screens	Workflows
12	4	1

Capabilities

12 capabilities

Capability	What it does
Risk profiles	
Risk profile register	Shows whether each party's assessment is missing, in progress, awaiting approval, current, due soon, expired, waived or superseded, with the next action.
Guided questionnaire	Asks scored questions on objective, horizon, liquidity, knowledge, experience and loss tolerance, and maps the result to Conservative, Moderate, Balanced, Growth or Aggressive.
External assessment	Records a category from an approved outside process with its evidence reference.
Assessment history	Holds every version with its score, questionnaire and scoring model versions, assessor, validity, acknowledgement and any override.

Capability	What it does
Suitability configuration	
Categories and scoring	Sets ordered bands with score ranges and scoring models, with a simulator that scores sample answers without recording them.
Questionnaire builder	Builds questionnaires from sections, ordered questions, scored answers, follow-ups and declarations.
Suitability matrix	Sets each investor category against each product risk level as eligible, eligible with consent or blocked, with the rule that explains it.
Validity and reassessment	Sets the validity period, the due-soon window and the events that require early reassessment.
Configuration release	Takes a configuration version through draft, validation, submission and approval, and makes it active on its date.
Offering policies	
Scoped mismatch rules	Sets whether a mismatch is allowed with disclosure and consent or blocked, by institution, investor classification, product family, channel, segment, product or share class.
Missing profile treatment	Sets whether a missing profile requires an assessment or allows an approved waiver, with exception approval by a supervisor or compliance.
Rule resolution	Shows which rule applies to a described case and why, including conflicts between policies before release.

Workflows

Assessing an investor

1. Record the questionnaire or an approved external assessment.
2. A second person approves it, and the questionnaire is scored on approval.
3. The category applies to every order until it expires or is reassessed.

Integrations and dependencies

Works with	How
TA-01 Onboarding and Investment Accounts Transfer Agency System	Onboarding records the first assessment.
TA-07 Investor Dealing Transfer Agency System	Investor dealing checks suitability at capture.
TA-10 Investment Order Processing Transfer Agency System	Investment order processing checks suitability at capture.
WM-06 Investment Policy Statements and Monitoring Wealth Management System	A policy statement in the Wealth Management System requires a usable risk profile.

By line of business

- Each line of business ships with its own suitability policy, while the rules engine and screens are the same.

TA-03 | Transfer Agency System | Both implementations

AML, CFT and Investor Restrictions

Applies the anti-money laundering and counter-terrorist financing controls to investor and customer activity. Rule-based monitoring raises alerts and screening results are decided in one workbench. Investigations run as cases, suspicious transaction reports are filed with PPATK, and restrictions stop activity at the point of capture.

Business use

Used to monitor transactions, screen parties against sanctions, DTTOT and PEP lists, investigate AML concerns, report suspicious transactions (LTKM, LTKT, LTKL), and restrict investors and accounts.

Screens

- **AML and CFT Alert Queue**
  Compliance and Risk › Financial Crime

  Reports › Compliance and AML Reports

Included in
Every edition

Capabilities	Screens	Workflows
14	6	1

Capabilities

14 capabilities

Capability	What it does
Monitoring and screening	
Monitoring scenarios	Monitors for large transactions, activity above the declared expectation, velocity, rapid in and out, structuring, high-risk party activity and dormant reactivation, through scenarios versioned with their thresholds.
Alert queue	Lists alerts filtered by status, severity and scenario. Each alert shows expected against observed activity, the data the rule read and the linked instructions.
Alert triage	Triages and reviews alerts, requests information, escalates to a case, or closes an alert as a false positive or explained with a mandatory rationale. Alerts are never deleted.

Capability	What it does
Screening workbench	Holds every sanctions, DTTOT, PEP and watchlist result from onboarding, opening on undecided hits with the days they have waited.
Dispositions	Records each hit as a false positive, a confirmed match or escalated, with reasoning. A confirmed match fails the assessment, opens a high-severity case and blocks the party.
AML alert summary	Shows alerts raised, parties monitored and flagged, alerts open, escalated and reported, and the amount flagged, by scenario, severity and status for any period.
Cases and reporting	
Compliance cases	Records screening, AML, KYC review, complaint and incident investigations with severity, confidentiality, allegation, linked sources and chronology.
Case decisions	Records each case's decision as no further action, enhanced monitoring, restriction, remediation, a report to PPATK or exit from the relationship.
PPATK reports	Drafts LTKM, LTKT and LTKL reports from a decided case with narrative, indicators and the underlying activity, and validates them before approval.
goAML submission	Submits approved reports and records their acknowledgement or rejection. A rejected report is corrected by a new report that references it. The goAML gateway is simulated in this version.
Restricted access	Reports are visible to authorised staff only, and each view is recorded.
Restrictions	
Restriction types	Blocks all activity, or only subscriptions, redemptions, switching or transfers, or places a payment or communication hold, on a party or a single account.
Origin and basis	Records whether a restriction comes from a compliance decision, legal order, screening, AML alert, case, KYC review or complaint, with its legal basis, review and lapse dates and evidence.
Enforcement	Checks restrictions at order capture, before release, on transfers and on structured orders. The record lists the open orders a restriction would stop.

Workflows

From alert to PPATK report

1. Monitoring raises an alert on investor activity.
2. An analyst triages it and escalates it to a case.
3. The case is investigated and decided as a report to PPATK.
4. The report is drafted, validated and approved under restricted access.
5. It is submitted through goAML and the response is recorded.

Integrations and dependencies

Works with	How
TA-01 Onboarding and Investment Accounts Transfer Agency System	Screening results come from onboarding.
TA-07 Investor Dealing Transfer Agency System	Monitoring reads investor orders, and restrictions stop them.
TA-10 Investment Order Processing Transfer Agency System	Monitoring reads customer orders, and restrictions stop them.
FN-08 Compliance Oversight and Incidents Core Platform Foundation	Alerts, hits and restrictions are counted on the compliance dashboard.
PPATK goAML Outside system	Submits reports and receives acknowledgements. The exchange is simulated in this version.

TA-04 | Transfer Agency System | Both implementations

Complaints and Disputes

Records each investor or customer complaint against the order, account or product it concerns and resolves it within the service levels. A second person agrees each resolution, and complaints are escalated to mediation or the regulator where required.

Business use	Used to handle complaints, resolve disputes, care for vulnerable customers, and escalate to LAPS SJK and OJK.
Screen	Complaints and Disputes Compliance and Risk › Conduct and Service

Included in
Every edition

Capabilities	Screens	Workflows
6	1	1

Capabilities

6 capabilities

Capability	What it does
Complaint register	Records service, advice and suitability, fees, transaction error, statements, data privacy, staff conduct and product performance complaints by channel and severity.
Service levels	Sets due dates on receipt to acknowledge within two days and resolve within twenty.
Investigation	Assigns the complaint, records progress, waits on the customer or opens a compliance case.
Governed resolution	Records the root cause, decision and remedy (apology, correction, reversal or compensation with an amount), agreed by a second person.
External escalation	Escalates to mediation at LAPS SJK or refers to OJK, with the external reference.
Vulnerable customers	Flags a complainant as vulnerable.

Workflows

Resolving a complaint

1. Register the complaint, linked to the order it concerns.
2. Acknowledge it within the service level and investigate.
3. Propose the resolution for a second person to agree.
4. Close it, recording whether the customer accepted.

Integrations and dependencies

Works with	How
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	A complaint can open a compliance case.
FN-08 Compliance Oversight and Incidents Core Platform Foundation	Overdue complaints appear on the compliance dashboard.

TA-05 | Transfer Agency System | Both implementations

External Processing and Exceptions

Shows each message exchanged with outside systems about an investor or customer order. It also shows each situation that requires a person before a record can be relied on: unknown outcomes, failed legs, rejections and duplicates.

Business use	Used to oversee straight-through processing and manage exceptions.
Screens	**External Processing** Orders and Transactions › External Processing **Processing Exceptions** Orders and Transactions › External Processing

Included in
Every edition

Capabilities	Screens	Workflows
5	2	1

Capabilities

5 capabilities

Capability	What it does
Message monitor	Lists dealing instructions, acknowledgements, confirmations, cancellation requests and timeouts by system and direction, each linked to its order.
Duplicate recognition	Records a repeated confirmation as a duplicate that changes nothing.
Mapped identifiers	Outbound messages carry the external codes held in the mapping register, such as KSEI fund and participant codes.
Processing exceptions	Lists unknown outcomes, failed settlement legs and external rejections as exceptions, each resolved with a recorded explanation.
Rejection handling	An external rejection releases reserved units, cancels the unfilled quantity and marks funded money for refund.

Workflows

Resolving an unknown outcome

1. A counterparty does not reply and the order is marked unknown.
2. The exception appears in the queue with its order.
3. Record the actual outcome on the order and resolve the exception.

Integrations and dependencies

Works with	How
FN-07 Integration Management Core Platform Foundation	Outbound identifiers are resolved from external mappings.
FN-08 Compliance Oversight and Incidents Core Platform Foundation	Open exceptions are offered as candidate incidents.
S-INVEST, brokers, dealers and core banking Outside system	Counterparty messages are simulated in this version.

By line of business

- Asset Management exchanges fund dealing messages with S-INVEST. Banking also routes bond, ETF and deposit orders to dealers, brokers, issuers and core banking.

TA-06 | Transfer Agency System | Asset Management implementation

Unit Registry

Keeps the record of who holds units in each of the manager's funds. Holdings are split into settled, reserved and pending units behind an append-only movement ledger, and units move between holders only on documentary evidence. Corrections are made through approved adjustments, and the register is reconciled to the KSEI S-INVEST balance statement.

Business use

Used to maintain the unit holder register, handle transfers, inheritance and changes of ownership, correct the register, reconcile it to KSEI S-INVEST, and determine distribution entitlements.

Screens

- **Unit Holders and Balances**
  Investor Operations › Unit Registry
- **Asset Transfers**
  Investor Operations › Unit Registry

  Investor Operations › Unit Registry

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
11	5	2

Capabilities

11 capabilities

Capability	What it does
Register	
Unit holders and balances	Shows one line per investor, account, fund and class with settled, reserved, available and pending units and their value at the latest NAV.
Movement ledger	Records every unit and cash movement with its cause. A movement is never amended, and a correction is a further movement.
Cost and holding period	Holds the average cost and first-held date on each holding and carries them across transfers.
Distribution entitlements	Fixes holders from the register at the record date of a fund distribution, paid in cash or reinvested units.

Capability	What it does
Transfers	
Transfer types	Records transfers between own accounts, on change of ownership, on inheritance, on change of selling agent and on migration from another registrar.
Evidence checklist	Sets the documents each reason requires: death certificate and heirship for inheritance, deed of gift, court order, merger deed and signed instructions.
Document review	Records each document as verified or rejected by its reviewer, and refuses submission while a mandatory document is unverified.
Transfer posting	Posts out and in movements with pro-rata cost and no price, cash or fund book effect. A posted transfer is reversed only by another transfer.
Adjustments and reconciliation	
Register adjustments	Increases or decreases a holding with a cause, effective date and evidence under maker-checker, previewing units and value afterwards.
KSEI reconciliation	Compares the register with the S-INVEST balance statement per IFUA, fund and class, and shows each line as matched, different, not at KSEI or not in the register.
Closing a difference	Raises a prefilled adjustment from a difference with the statement as evidence, and shows units still settling as a possible cause.

Workflows

Transferring units on inheritance

1. Choose the holding and the inheritance reason.
2. Name the heir and their account.
3. Verify each required document.
4. Submit the transfer, which posts once a second person approves it.

Reconciling to KSEI

1. Compare the register with the latest balance statement.
2. Work the largest differences first.
3. Raise an adjustment for each difference, which posts on approval.

Integrations and dependencies

Works with	How
TA-07 Investor Dealing Transfer Agency System	Allotted and cancelled units from investor dealing post the movements behind each holding.
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	Restrictions on the holder block transfers.
FM-12 Corporate Actions and Income Distribution Fund Management System	Fund distributions pay the holders fixed from the register.
FM-11 Capital Movements Fund Management System	When the fund posts units from this register, allocations become the fund's capital movements.
KSEI S-INVEST Outside system	Receives the balance statement for reconciliation. The statement is simulated in this version.

TA-07 | Transfer Agency System | Asset Management implementation

Investor Dealing

Processes investor instructions in the manager's own mutual funds from capture to settlement. Each order is checked before it is taken, allotted or cancelled at the published NAV of its dealing date, and settled only against evidence, with the settled cash posted to the fund's ledger.

Business use

Used to process subscriptions, redemptions and switches between funds and classes, allot and cancel units, and settle with investors.

Screens

Transaction Blotter
Investor Operations › Order Management

Capture Investor Order

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
13	4	1

Capabilities

13 capabilities

Capability	What it does
Capture	
Four-step order ticket	Captures each order in four steps: investor and eligibility, instruction and fund, order details, and review and submit.
Pre-trade checks	Checks that the investor is active and onboarded, along with risk profile, KYC and screening, restrictions, open AML alerts, suitability, account type, holdings, minimum subscription and holding, funds, selling agent licence and cut-off.
Suitability and consent	Decides whether the order is eligible, eligible with recorded consent or blocked, from the suitability matrix and offering policies.
Pricing indication	Shows the units at the last published NAV, the subscription, redemption and switching fees from the share class, and VAT on fees.
Fee within the prospectus band	Allows a dealing fee to be changed within the prospectus band with a mandatory reason, while the configured rate stays on the order.
Cut-off	Orders after the 13:00 cut-off deal at the next bourse day's valuation.

Capability	What it does
Processing	
Transaction blotter	Lists orders as needs action, in progress, completed and all, with the next step and who it waits on.
Approval	Places order capture under maker-checker where configured, and validates the order again on approval.
Allotment at NAV	Releases orders to S-INVEST, where they are acknowledged and allotted at the dealing date NAV once it is published.
Switching	Links a redemption leg to a subscription leg funded from the confirmed redemption proceeds.
Investor transactions	Lists confirmed transactions only, with units, price, fee, tax and net. A correction is a linked reversal.
Settlement	Settles cash and unit legs against evidence, singly or in batch, and raises failed legs as exceptions. Subscriptions settle a day after the NAV and redemptions within seven exchange days.
Fund ledger link	Posts settled subscription and redemption cash to the fund's ledger and its capital movement.

Workflows

A subscription

1. Capture the subscription, and the checks either pass or state what to resolve.
2. Payment is matched to the order.
3. The order is released to S-INVEST and acknowledged.
4. Units are allotted at the dealing date NAV.
5. Cash and units settle against evidence.

Integrations and dependencies

Works with	How
TA-06 Unit Registry Transfer Agency System	Allotments and cancellations post to the unit registry.
TA-02 Risk Profiling and Suitability Transfer Agency System	Suitability is decided at capture.
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	Restrictions stop orders, and monitoring reads them.
TA-05 External Processing and Exceptions Transfer Agency System	Release, acknowledgement and allotment messages and their exceptions appear there.
FM-11 Capital Movements Fund Management System	Allotments become capital movements where the fund posts units from the platform register.
FM-15 Fund Accounting and General Ledger Fund Management System	Settled cash posts subscription and redemption journals.
KSEI S-INVEST Outside system	Releases fund dealing orders to S-INVEST. Acknowledgement and allotment are simulated in this version.

By line of business

- Screens are named Transaction Blotter, Capture Investor Order and Investor Transactions.

TA-08 | Transfer Agency System | Asset Management implementation

Selling Agent Network and Client Coverage

Models how the manager's investors are reached and serviced: the selling agent network with licences and agreements, the direct channel, the investment and client team, sales licences, and who is responsible for each client and mandate over time.

Business use

Used to oversee selling agents, administer the client team, manage sales licences, and assign responsibility for clients and mandates.

Screens

- **Selling Agent Network**

Capabilities

5 capabilities

Capability	What it does
Selling agent network	Lists each selling agent with its APERD classification, licence, agreement, representatives, external codes and the investors it originated, alongside the direct channel.
Client team directory	Lists team members with role, placement, assigned clients and assets.
Sales certifications	Holds the licence master (WAPERD, WPPE, AAJI) with issuer, covered products and validity, records licences per person and flags them when expiring.
Licence enforcement	Order capture refuses a seller without a licence in force for the asset class.
Client and mandate responsibility	Records one responsible person per client, effective-dated, and never overwrites the history.

Integrations and dependencies

Works with	How
TA-07 Investor Dealing Transfer Agency System	Orders record the selling agent and check the seller's licence.
FN-02 Party and Counterparty Master Core Platform Foundation	Each investor's party record holds its selling agent and servicing owner.

By line of business

- Screens are named Selling Agent Network, Investment and Client Team Directory, and Client and Mandate Responsibility.

TA-09 | Transfer Agency System | Banking implementation

Investment Product Shelf

Holds the investment products the bank distributes, each type with its own register and record. Third-party funds and mandates are set up and released under approval, and bonds and ETFs come from the instrument master. The lifecycle view shows what moves each product next.

Business use

Used to onboard products and manage the shelf, set up third-party funds and mandates, offer bonds and sukuk through to maturity, and manage each product's lifecycle.

Screens

Capabilities	Screens	Workflows
12	7	1

Capabilities

12 capabilities

Capability	What it does
Shelf	
All products	Lists every product across types with its manufacturer or issuer, set-up state and status.
Mutual funds and mandates	Lists money market, fixed income, balanced, index and equity funds and discretionary mandates (KPD) with manager, set-up state, AUM and returns.
Product set-up	Registers a fund from its manager and custodian, or a mandate referral from its manager and client, then completes what the bank needs to offer it: the selling agent agreement, the prospectus and summary, the dealing terms it applies, its commission, payment instructions, availability, S-INVEST codes and suitability. The manager's book, valuation and unit register are not set up by the bank.

Capability	What it does
Product record	Shows the overview, disclosed top holdings, product details, analytics, documents, activity and version history, with scenario and Monte Carlo simulation.
Bonds and sukuk	Lists government, corporate and sukuk paper with coupon, maturity, rating, clean price and yield, and shows the coupon schedule per 100, per billion or per lot.
ETFs	Lists index and gold ETFs with last price, volume, lot cost and gold backing.
Bancassurance	Holds a governed register for unit-linked insurance on the shelf. Product set-up is planned for a later version.
Order from the record	Places a subscription to an offering, or an order, from a bond or ETF record.
Lifecycle	
Lifecycle journeys	Tracks structured issues from scheduled to matured, bonds from offering to redeemed, deposits from placed to closed and funds from active to terminated.
Lifecycle worklist	Lists products as needing action, active or ended, with the next milestone within 7, 30 or 90 days.
Milestone timeline	Shows completed, due and upcoming milestones with who moved them, and the clients holding the product.
Termination	Records the termination of a fund or mandate with a reason.

Workflows

Adding a fund to the shelf

1. Save a draft with the fund's manager and custodian.
2. Complete what the bank needs to offer it, from the agreement to suitability.
3. Submit it for a second person to approve the release.
4. The fund is available for orders.

Integrations and dependencies

Works with	How
TA-10 Investment Order Processing Transfer Agency System	Product records link to order capture.
TA-02 Risk Profiling and Suitability Transfer Agency System	Product risk levels feed suitability.
FN-04 Prices and Market Data Core Platform Foundation	Receives prices and published fund NAVs.

TA-10 | Transfer Agency System | Banking implementation

Investment Order Processing

Processes each customer instruction in an investment product from capture to settlement. The order ticket applies eligibility, suitability, limit and funds checks from the same rules that validate the order, the blotter shows what each order needs next, and every leg settles only against evidence.

Business use

Used to process fund subscriptions, redemptions and switches, bond and sukuk primary subscriptions and secondary purchases and sales, and ETF purchases and sales, through approval, release, confirmation and settlement, with transaction history and reversal.

Screens

Orders
Orders and Transactions › Order Management

Create Order

Capabilities	Screens	Workflows
15	4	1

Capabilities

15 capabilities

Capability	What it does
Capture and validation	
Four-step order ticket	Captures each order in four steps, reachable from a product or customer record: customer and eligibility, instruction and product, order details, and review and submit.
Order types	Covers subscriptions, redemptions and switches in funds, primary subscriptions, purchases and sales in bonds, purchases and sales of ETFs in lots, and deposit placements and withdrawals.
Pre-trade checks	Checks that the customer is active and onboarded, along with risk profile, KYC and screening, restrictions, AML alerts, suitability, dealing window, account type, holdings, minimums, lot sizes, available balance, seller licence and cut-off.
Fees and charges	Calculates fund dealing fees with VAT, ETF brokerage and final tax on sales, bond accrued interest and tax on gains, and deposit interest and tax.

Capability	What it does
Pricing indication	Shows units at the last NAV, bonds at clean price plus accrued interest and ETFs at last price, with gain or loss on a sale against average cost.
Portfolio impact	Shows the holding before and after with weights, and the settlement summary.
Goal attribution	Attributes an order to a goal or sub-portfolio. A sale draws only on what is set aside there.
Approval	Places capture under maker-checker. The checker sees the order, fees against the prospectus and the suitability outcome.
Execution and settlement	
Order blotter	Lists orders as needs action, in progress, completed and all, filtered by asset class, stage, instruction and what the order is waiting on.
Next step per order	Shows the next step for each order: submit, approve, record a dealer price, accept a quote, match funds, release, record the confirmation, settle, work a failed leg, refund or resolve.
Order workspace	Shows the instruction, dates and pricing, executions, transactions, settlement, messages, linked switch legs and a full timeline.
Quotes and confirmations	Records dealer quotes with price, accrued interest and validity, and confirmations with counterparty reference, quantity and price.
Customer transactions	Lists confirmed transactions only, with quantity, price, gross, fee, tax and net. A correction is a linked reversal.
Settlement	Settles cash and asset legs against one evidence reference, singly or in batch, and explains any refusal per leg.
Refunds	Returns the money of a rejected or partly allotted order against evidence.

Workflows

A bond purchase

1. Capture the purchase, and the checks either pass or state what to resolve.
2. A second person approves.
3. Record the dealer's price and the customer's acceptance.
4. Release the order and record the confirmation.
5. Settle the cash and bond legs against evidence.

Integrations and dependencies

Works with	How
TA-09 Investment Product Shelf Transfer Agency System	Orders are placed on shelf products.
TA-14 Customer Holdings Records Transfer Agency System	Settled legs post to the customer holdings records.
TA-02 Risk Profiling and Suitability Transfer Agency System	Suitability and consent are decided at capture.
TA-03 AML, CFT and Investor Restrictions Transfer Agency System	Restrictions stop orders, and monitoring reads them.
TA-05 External Processing and Exceptions Transfer Agency System	Messages and exceptions for each order appear there.
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Orders can be placed from the client wealth record.
Core banking Outside system	Reads bank accounts and available balances, and sends debits. The exchange is simulated in this version.

By line of business

- Screens are named Orders, Create Order and Customer Transactions. Maker and checker are always separate.

TA-11 | Transfer Agency System | Banking implementation

Structured Products

Designs structured products as templates, launches them as dated issues and builds the order book with eligibility checked at entry. Each issue runs through launch, trade, observation, fixing and settlement, following the OJK rules for structured products (POJK 7/2016 as amended).

Business use	Used to design structured products, build and launch issue books, allocate and book trades, handle observation, fixing and maturity settlement, and terminate early.
Screen	Structured Products Products and Offerings › Investment Products

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
9	1	1

Capabilities

9 capabilities

Capability	What it does
Templates and issues	
Product classes	Covers market-linked principal protected deposits, range accrual deposits, equity-linked deposits and dual currency investments.
Payoffs	Covers one-touch, no-touch, double touch, digital call, put and range, range accrual, participation and dual currency payoffs.
Template design	Sets a template's structure, levels, distribution and termination: observation style, fixing source, target segments, allocation rule, customer funds control and early termination terms.
Issue design	Sets the offer window, from which trade, fixing, payment and maturity dates are derived, and the spot, barriers or strike, returns, participation and issue sizes.
Issue lifecycle	Changes terms, suspends or resumes an issue, decides launch, books the hedge trade, records observations, determines at fixing and settles at maturity.

Capability	What it does
Orders	
Eligibility at entry	Checks for an onboarded customer, a permitted category, a suitable risk profile (never sold on consent), a certified sales officer, balance, currency, limits, capacity, the offer window and acknowledged documents.
Allocation	Allocates by hard cap, first come first served or pro rata, with funds held, debited to suspense or debited at trade.
Order outcomes	Tracks each order as subscribed, allocated or not launched, traded, determined, settled, or withdrawn or terminated early at the unwind cost.
Governance	Places template, issue, launch, trade, fixing, settlement and order actions under maker-checker.

Workflows

Running an issue

1. Design the template and open a dated issue.
2. Take orders during the offer window.
3. Decide the launch and allocate the book.
4. Book the hedge trade and record observations.
5. Determine at fixing and settle at maturity.

Integrations and dependencies

Works with	How
TA-10 Investment Order Processing Transfer Agency System	Structured orders are captured from the order ticket.
TA-13 Sales Force and Relationship Coverage Transfer Agency System	Sales officer certification is checked at entry.
TA-09 Investment Product Shelf Transfer Agency System	Issues appear in the product lifecycle view.

TA-12 | Transfer Agency System | Banking implementation

Client Deposits

Manages the bank's client time deposit programmes and every placement a client holds. Each placement is followed through its earnings, maturity and instruction, from the order that places it to rollover or redemption at maturity.

Business use	Used to distribute time deposits, record maturity instructions and roll over placements, process early breaks, and calculate deposit interest and tax.
Screen	**Deposits** Products and Offerings › Banking and Protection

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
5	1	1

Capabilities

5 capabilities

Capability	What it does
Deposit shelf	Lists programmes by bank with tenors, best rate, minimum, permitted maturity instructions and break terms.
Placement capture	Captures placements from the order ticket, where the tenor sets the board rate and maturity, negotiated rates are allowed, and interest is paid at maturity, monthly or quarterly.
Placement register	Lists maturing, open, instructed and closed placements with principal, accrued interest, average rate and counterparty exposure.
Maturity instructions	Records an instruction to redeem, roll principal, roll principal and interest, or roll part. An earlier date is an early break with its penalty.
Maturity processing	Calculates interest, tax withheld and penalty, and returns or rolls the principal, singly or in batch, with the rollover chain retained.

Workflows

A client deposit

1. Place the deposit from the order ticket at the board or negotiated rate.
2. The confirmation opens the placement with its bilyet number.
3. Record the maturity instruction.
4. At maturity, redeem or roll into a successor placement.

Integrations and dependencies

Works with	How
TA-10 Investment Order Processing Transfer Agency System	Placements and withdrawals are captured as orders.
TA-09 Investment Product Shelf Transfer Agency System	Placements appear in the product lifecycle.
Core banking Outside system	Receives placement confirmations, which are simulated in this version.

TA-13 | Transfer Agency System | Banking implementation

Sales Force and Relationship Coverage

Models who sells to and services each customer: relationship managers and sales staff with their licences, how business rolls up the marketing tree, each customer's primary relationship manager over time, and the movement of relationship managers and their customers between branches.

Business use

Used to administer sales staff, manage WAPERD, WPPE and AAJI sales licences, assign client coverage, and transfer relationship managers.

Screens

Marketing Tree

Settings and Configuration › Business Configuration

Included in

Banking and Full Service Editions

Capabilities	Screens	Workflows
8	5	1

Capabilities

8 capabilities

Capability	What it does
Sales force	
Marketing tree	Shows how business rolls up from unit to head office, with active relationship managers and assigned customers at each node.
Sales and RM directory	Lists relationship managers, senior RMs, team leads and sales officers with placement, assigned customers and assets.
Sales certifications	Holds the licence master (WAPERD, WPPE, AAJI) with issuer, covered products and validity, records licences per person and flags them when expiring.
Licence enforcement	Order capture refuses a seller without a licence in force for the asset class.

Capability	What it does
Coverage	
Client assignments	Assigns one primary relationship manager per customer, effective-dated, with new, end and replace actions. History is never overwritten.
Coverage gaps	Lists active customers without a relationship manager as a work queue.
RM mutations	Moves a relationship manager to another branch or unit on a date, retaining or transferring their customers, with the impact reviewed before confirmation.
Scheduled moves	Allows a future move to be cancelled before it takes effect, reversing its records.

Workflows

Moving a relationship manager

1. Choose the RM and the new branch or unit with a date and reason.
2. Decide which customers pass to a replacement RM.
3. Review the impact and confirm.
4. On the effective date, placements and assignments change.

Integrations and dependencies

Works with	How
FN-03 Institution, Organisation and Access Core Platform Foundation	Relationship managers are placed in the organisation structure.
TA-10 Investment Order Processing Transfer Agency System	Orders are credited to the RM's branch and check the seller's licence.
WM-01 Relationship Book Management Wealth Management System	The relationship book is organised by relationship manager.

TA-14 | Transfer Agency System | Banking implementation

Customer Holdings Records

Keeps the bank's record, as selling agent, of what each customer holds in the products it distributes. Balances sit behind an append-only movement ledger, holdings move between accounts only on evidence, and corrections are approved adjustments. Fund holdings in IFUA accounts are reconciled to the KSEI S-INVEST balance statement.

Business use

Used to keep selling agent holdings records, transfer holdings between accounts and owners, correct holdings, and reconcile to KSEI S-INVEST.

Screens

Capabilities	Screens	Workflows
5	5	1

Capabilities

5 capabilities

Capability	What it does
Investment registry	Shows one line per customer, account, product and class with settled, reserved, available and pending quantities and value today.
Cash and asset movements	Records every movement with its cause. A movement is never amended, and a correction is a further movement.
Asset transfers	Records transfers between own accounts, on change of ownership, on inheritance and on change of selling agent, each with its evidence checklist and approval.
Adjustments	Increases or decreases a holding with cause, date and evidence, under maker-checker.
KSEI reconciliation	Compares fund holdings in IFUA accounts with the S-INVEST balance statement and closes each difference with a prefilled adjustment.

Workflows

Correcting a holding

1. A reconciliation difference or a known error is identified.
2. Raise the adjustment with cause and evidence.
3. A second person approves and the adjustment posts.

Integrations and dependencies

Works with	How
TA-10 Investment Order Processing Transfer Agency System	Settled order legs post the movements behind each holding.
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Client wealth values these holdings.
KSEI S-INVEST Outside system	Receives the balance statement, which is simulated in this version.

By line of business

- In Banking these screens sit under Selling Agent Records. The bank keeps a record of its customers' holdings and is not the fund's registrar.

TA-15 | Transfer Agency System | Banking implementation

Product Events and Entitlements

Registers income and redemption events on the funds and bonds customers hold and pays each customer's entitlement, net of withholding tax, to the right account.

Business use	Used to service fund dividends, pay coupons and principal, process maturities, and withhold tax.
Screen	**Product Events** Products and Offerings › Prices and Market Data

Included in

Banking and Full Service Editions

Capabilities	Screens	Workflows
4	1	1

Capabilities

4 capabilities

Capability	What it does
Event types	Records cash and unit dividends on funds, and coupons, principal payments and maturities on bonds, with record, ex and payment dates.
Per-customer entitlements	Calculates eligible units or nominal, gross, tax, net and new units for each customer, and shows the account credited.
KSEI bulletin intake	Selects upcoming coupons, redemptions and distributions from the KSEI bulletin, each becoming its own request. The bulletin is simulated in this version.
Governed payment	Places registration, payment and cancellation under maker-checker, and flags customers without an account in the payment currency.

Workflows

Paying a coupon

1. Register the coupon from an announcement or the KSEI bulletin.
2. A second person approves it.
3. On the payment date, review each customer's entitlement and pay it.

Integrations and dependencies

Works with	How
TA-14 Customer Holdings Records Transfer Agency System	Entitlements are calculated from the customer holdings records.
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Income received appears in the client wealth record.

By line of business

- In Banking this screen is named Product Events.

TA-16 | Transfer Agency System | Banking implementation

Campaigns and Referral Programs

Defines promotions and referral programmes for investment products: who they address, what qualifies, what is rewarded and how customers are informed. The audience is resolved from current customer data.

Business use	Used to design promotions, run referral programmes and target audiences.
Screen	Campaigns and Referral Programs Products and Offerings › Distribution Setup

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
4	1	1

Capabilities

4 capabilities

Capability	What it does
Audience builder	Builds an audience from nested AND and OR rules over about forty attributes (age, segment, risk profile, AUM, holdings, returns, transactions, RM, branch, consent) or from selected customers, with a live count and preview.
Qualification and reward terms	Sets what qualifies (investing, a first investment or referring a customer, with product and minimum) and the reward (cashback, fee waiver or discount, or points), with caps and budget.
Notification settings	Sets email, SMS or in-app channels and messages, limited to customers who consented to marketing.
Campaign lifecycle	Creates, edits, pauses, resumes and ends campaigns under maker-checker.

Workflows

Launching a campaign

1. Set the dates and referral code.
2. Build the audience and check the count.
3. Define qualification and reward.
4. Submit the campaign for a second person to approve.

Integrations and dependencies

Works with	How
FN-02 Party and Counterparty Master Core Platform Foundation	The audience is resolved from customer records and holdings.
TA-01 Onboarding and Investment Accounts Transfer Agency System	A campaign code can be recorded as a customer's acquisition source.

Section 3, solution system

Wealth Management System

The ongoing management of a banking client's portfolio and wealth relationship.

Modules	Screens	Capabilities	Workflows	Included in
8	7	51	3	**Banking and Full Service Editions**

The Wealth Management System supports relationship managers and advisory teams in managing each client's wealth over time: the consolidated portfolio, performance, attribution and risk, goals and projections, client statements, household and group views, investment policy statements, model portfolios and continuous monitoring against what was agreed.

It is a distinct solution system from the Transfer Agency System and can be scoped independently where the client's operating model permits. Its valuations read the client holdings and prices held on the platform.

Part of the Banking and Full Service Editions; scoped with or without the Transfer Agency System.

Modules

Code	Module	What it does	Screens	Page
WM-01	**Relationship Book Management**	Each relationship manager's book: assets, flows, revenue, client outcomes and what needs attention today.	1	96
WM-02	**Client Wealth and Portfolio Analytics**	A client's consolidated portfolio: holdings, assets held elsewhere, income, performance, attribution and risk.	1	98
WM-03	**Goals and Financial Planning**	Client goals and sub-portfolios, systematic investment plans and Monte Carlo projections.	1	101
WM-04	**Client Statements and Reporting**	Financial statements of a client's wealth for any period, and the branded consolidated statement.	1	104
WM-05	**Group Wealth**	Households, families and companies read as one consolidated portfolio.	1	106
WM-06	**Investment Policy Statements and Monitoring**	Governed client policy statements, and monitoring of each portfolio against what was agreed.	2	108

Code	Module	What it does	Screens	Page
WM-07	**Model Portfolios**	The bank's published model portfolios by risk profile, with targets, bands and expected statistics.	1	111
WM-08	**Benchmarks**	The benchmark master that model portfolios, policy statements and products are measured against.	1	113

WM-01 Wealth Management System

Relationship Book Management

Presents a relationship manager's book, or the whole bank's, on one page. It shows assets under advice, net new money, revenue by source, client outcomes, and the clients who need attention today, most urgent first.

Business use	Used by relationship managers to manage their books, prioritise clients and monitor advisory revenue.
Screen	**Wealth Management Overview** Wealth Management › Wealth Services

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
5	1	0

Capabilities

5 capabilities

Capability	What it does
Book figures	Shows assets under advice, clients, net new money, revenue, sharing fee run rate and one-year return, for all relationship managers or one.
Attention queue	Lists policy statement breaches, goals that have slipped and items worth raising, most urgent first, each opening the client.
Revenue	Shows upfront fees booked on transactions, trail or sharing fee run rate by source, and management fee for context, each kept separate.
Clients table	Lists each client with assets, share of book, net new money, one-year time-weighted return, trail and attention.
RM league table	Compares relationship managers by clients, assets, share, net new money, revenue, margin in basis points and clients to see.

Integrations and dependencies

Works with	How
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Opens each client in the client wealth record.
WM-06 Investment Policy Statements and Monitoring Wealth Management System	Receives the policy statement breaches that drive the attention queue.
TA-13 Sales Force and Relationship Coverage Transfer Agency System	Organises the book by relationship manager coverage.

WM-02 Wealth Management System

Client Wealth and Portfolio Analytics

Brings a client's investments with the bank, and assets recorded as held elsewhere, into one view. It covers allocation and holdings, income and realised results, time-weighted performance against benchmark, attribution against the model, and risk measured ex ante, historically and under stress.

Business use	Used to review client portfolios, measure and attribute performance, assess portfolio risk and prepare advice.
Screen	**Client Wealth** Wealth Management › Wealth Services

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
12	**1**	**1**

Capabilities

12 capabilities

Capability	What it does
Portfolio	
Client register	Lists clients with their risk profile, relationship balance, money-weighted return, policy standing, drift from model and goals, filtered by what needs attention.
Overview	Shows net assets, returns against benchmark with the FX effect, allocation, currency exposure, product families, maturities ahead and observations worth raising.
Holdings	Lists holdings by product family or asset class with units or nominal, price, value, accrued interest, weight and realised and unrealised results, with look-through, liquidity and issuer exposure.
Assets held elsewhere	Records assets held at other institutions at a stated value, so the client's position is complete.
Orders in flight	Shows open orders linked to the order blotter, and places new orders from the record.
Income and realisations	Shows realised gains, income received gross and net of tax, and income and principal due over the next twelve months.

Capability	What it does
Analytics and risk	
Performance	Calculates time-weighted return, benchmark and excess return, and shows the portfolio against its benchmark indexed to 100.
Risk-adjusted measures	Calculates volatility, Sharpe, Sortino, beta, correlation, tracking error, information ratio and maximum drawdown.
Contribution and attribution	Calculates contribution by asset class and holding, and attribution against the model portfolio.
Benchmark selection	Chooses the benchmark in order of preference: the policy statement's, then the model's, then a reference model, then the client's own allocation.
Risk assessment	Measures ex ante and realised volatility, one-year VaR at 95 percent, probability of a losing year and drawdown, against the profile or agreed tolerance.
Stress scenarios	Applies an equity shock, parallel yield shift, credit spread widening, redemption requirement and a combined stress, showing each holding before and after.

Workflows

Preparing a client review

1. Open the client from the book's attention queue.
2. Review performance, attribution and risk.
3. Check standing against the policy statement.
4. Place orders to act on the review.

Integrations and dependencies

Works with	How
TA-14 Customer Holdings Records Transfer Agency System	Reads holdings from the customer holdings records.
TA-10 Investment Order Processing Transfer Agency System	Places orders through investment order processing.
FN-04 Prices and Market Data Core Platform Foundation	Values holdings at the platform's prices and FX rates.
WM-07 Model Portfolios Wealth Management System	Measures attribution against the model portfolio.

WM-03 Wealth Management System

Goals and Financial Planning

Sets a client's goals and the portions of the portfolio set aside for them, and measures the chance of meeting each goal. It projects the portfolio forward under the policy model, the current allocation or an alternative.

Business use	Used to plan against client goals, project portfolios forward and set up systematic investment plans.
Screen	Client Wealth Wealth Management › Wealth Services

Included in

Banking and Full Service Editions

Capabilities	Screens	Workflows
6	1	1

Capabilities

6 capabilities

Capability	What it does
Goals	
Goals	Records each goal's target value and date, priority and model. Shows the chance of success from simulation, median and 5th to 95th percentile outcomes and the required return.
Sub-portfolios	Sets aside units from holdings for a goal or purpose. A sale from the sub-portfolio draws only on what is set aside.
Systematic investment plan	Records a monthly or quarterly amount, product, bank account and auto-debit or reminder on the goal.
Goal drift	Tracks each goal's drift against its model, and closes a goal with a reason.
Projections	
Monte Carlo projection	Runs from 100 to 20,000 paths on the policy model, the current allocation or another model, over a chosen horizon with contributions.
Projection outputs	Shows simulated paths, the outcome distribution and percentile range, a year-by-year view, probability of loss, value at the return objective and the assumptions used.

Workflows

Setting a goal

1. Define the target, date and priority.
2. Choose the model and set aside the units that serve the goal.
3. Review the chance of success and required return.
4. Record a systematic investment plan if contributions are agreed.

Integrations and dependencies

Works with	How
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Holds goals and projections on the client wealth record.
WM-07 Model Portfolios Wealth Management System	Links each goal to the model portfolio it follows.
TA-10 Investment Order Processing Transfer Agency System	Allows orders to be attributed to a goal.

WM-04 Wealth Management System

Client Statements and Reporting

Presents a client's wealth as a set of financial statements for any period. It produces the consolidated client statement as a branded document with comparatives, performance and standing against the policy statement.

Business use	Used to report to clients and produce their periodic statements.
Screen	Client Wealth Wealth Management › Wealth Services

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
5	1	0

Capabilities

5 capabilities

Capability	What it does
Statement views	Shows a summary of net worth, financial position, income statement by product, changes in net worth, cash flows and holdings.
Periods	Sets the period to month, quarter or year to date, last year or a custom range.
Cash flows	Shows operating and investing flows, and records or removes manual flows.
CSV export	Exports the current statement view as a CSV file.
Consolidated client statement	Produces a landscape PDF with the institution's logo, compared with the last month end and year end. It covers overview, coming up, positions, holdings, profit and loss, results by holding, cash flow, performance and risk, goals and policy standing, basis of preparation and important information.

Integrations and dependencies

Works with	How
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Prepares statements from the client wealth record.
WM-06 Investment Policy Statements and Monitoring Wealth Management System	Reports the client's standing against the policy statement.
FN-03 Institution, Organisation and Access Core Platform Foundation	Brands the document with the institution's logo.

WM-05 Wealth Management System

Group Wealth

Reads a household, family or corporate group as one portfolio without pooling any assets. It shows consolidated assets, each member's share and contribution, allocation, liquidity and exposures the members hold in common.

Business use	Used to oversee household and family wealth and corporate group relationships.
Screen	Group Portfolios Wealth Management › Wealth Services

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
4	1	0

Capabilities

4 capabilities

Capability	What it does
Group register	Lists groups with their head, members, consolidated assets, largest member, net new money and relationship manager coverage.
Ownership and contribution	Shows each member's role, assets, share, risk profile, relationship manager, net new money and trail, linked to their own record.
Consolidated view	Shows allocation, liquidity and amounts falling due across the group.
Shared exposure	Shows issuers held by several members, and the spread of risk categories and models across the group.

Integrations and dependencies

Works with	How
FN-02 Party and Counterparty Master Core Platform Foundation	Reads group membership from the party master, where it is maintained.
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Opens each member in the client wealth record.

WM-06 Wealth Management System

Investment Policy Statements and Monitoring

Formalises each advised client's objectives, constraints, guidelines and strategic allocation in a versioned investment policy statement. It then measures the portfolio against it continuously and manages each breach as work.

Business use	Used to adopt and review investment policy statements, monitor portfolios, identify rebalancing and manage policy breaches.
Screens	**Investment Policy Statements** Wealth Management › Advice and Models **Portfolio Compliance Monitoring** Compliance and Risk › Oversight

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
9	2	1

Capabilities

9 capabilities

Capability	What it does
Policy statements	
Seven-step statement	Records the statement in seven steps: client, duties, objectives, constraints, guidelines, allocation and review.
Objectives and tolerance	Sets an absolute or relative return objective, drawdown or tracking error limits, and risk tolerance from willingness and ability.
Constraints	Records liquidity, horizon, tax, legal limits and circumstances such as sharia only, ESG screening, no structured products or rupiah only.
Guidelines	Sets permitted product families, leverage and derivatives, issuer limit, restrictions and benchmark.
Strategic allocation	Adopts a published model with permitted drift, rebalancing method and frequency. Shows the expected return, volatility, VaR and chance of meeting the objective.
Versions	Routes adoption, revision and withdrawal through maker-checker, and keeps full version history.

Capability	What it does
Monitoring	
Allocation against the model	Compares target, band, actual and deviation per asset class, and calculates the amount to move to return within the band.
Policy monitors	Checks risk against profile, drift, return objective, drawdown, tracking error, liquidity, guidelines and review date.
Client policy breaches	Measures every advised client against their statement, and tracks each breach with its owner, corrective plan and approved temporary exception.

Workflows

Adopting a policy statement

1. Confirm the client's risk profile is usable, reassessing if needed.
2. Complete objectives, constraints, guidelines and allocation.
3. Submit the statement for a second person to approve.
4. The portfolio is monitored against the statement from its effective date.

Integrations and dependencies

Works with	How
WM-07 Model Portfolios Wealth Management System	Adopts a published model portfolio as the strategic allocation.
TA-02 Risk Profiling and Suitability Transfer Agency System	Requires a usable risk profile.
WM-08 Benchmarks Wealth Management System	Takes the benchmark from the benchmark master.
FN-08 Compliance Oversight and Incidents Core Platform Foundation	Counts clients outside their statement on the compliance dashboard.

WM-07 Wealth Management System

Model Portfolios

Publishes the model portfolios advice is built on, each designed for a risk profile and horizon with targets and bands per asset class. It tracks which clients follow each model.

Business use	Used to govern model portfolios and set the strategic asset allocation that advice is built on.
Screen	Model Portfolios Wealth Management › Advice and Models

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
4	1	0

Capabilities

4 capabilities

Capability	What it does
Model design	Sets the target, minimum and maximum per asset class, the product families that may fill each class, risk profile, minimum horizon, rebalance tolerance and benchmark.
Expected statistics	Calculates expected return, volatility and Sharpe while editing, and shows the implied risk profile band.
Model record	Shows statistics, a projection over the horizon, capital market assumptions, allocation, clients following the model and version history.
Publish and retire	Routes publishing and retirement through maker-checker, and blocks retiring a model in use.

Integrations and dependencies

Works with	How
WM-06 Investment Policy Statements and Monitoring Wealth Management System	Provides the model a policy statement adopts as its strategic allocation.
WM-03 Goals and Financial Planning Wealth Management System	Provides the model a goal follows.
WM-02 Client Wealth and Portfolio Analytics Wealth Management System	Provides the model that attribution is measured against.

WM-08 Wealth Management System

Benchmarks

Maintains the market indices, uploaded series and composite benchmarks that model portfolios, client policy statements and distributed products are measured against. Each carries its history, analytics and governed changes.

Business use	Used to maintain benchmarks and construct composite benchmarks.
Screen	Market Benchmarks Products and Offerings › Prices and Market Data

Included in
Banking and Full Service Editions

Capabilities	Screens	Workflows
6	1	0

Capabilities

6 capabilities

Capability	What it does
Benchmark master	Lists market indices, uploaded series and composites with their latest level, year-to-date return and data source.
Stepped creation	Creates a benchmark in steps: kind, source, level check, details and review. It searches the market data service by symbol, uploads a CSV or Excel series with line-level checks, or composes a blend.
Composite benchmarks	Holds weighted blends of registered benchmarks, versioned by effective date so history is not rewritten.
Analytics	Calculates returns from one month to inception, volatility and maximum drawdown, and shows the history and data load log.
Usage and retirement	Lists the models, statements and products that use a benchmark, and blocks retiring one in use.
Governed changes	Routes creation, updates, level loads and weight revisions through maker-checker. Revised levels retain their before and after values.

Integrations and dependencies

Works with	How
WM-07 Model Portfolios Wealth Management System	Provides the benchmark that model portfolios reference.
WM-06 Investment Policy Statements and Monitoring Wealth Management System	Provides the benchmark that policy statements reference.
Market data service Outside system	Retrieves index history by symbol on request.

Section 4, solution system

Fund Management System

Funds, mandates and investment portfolios through their operating lifecycle.

Modules	Screens	Capabilities	Workflows	Included in
18	33	166	18	**Asset Management and Full Service Editions**

The Fund Management System is the institutional system an investment manager uses to manage its mutual funds and discretionary mandates: product set-up and governance, investment policy and compliance, portfolio construction, fund-level dealing, holdings, cash by bank account, corporate actions and income, valuation, NAV and custodian reconciliation, fund accounting, reporting and the daily close.

It can be implemented without the Transfer Agency System. Fund subscriptions and redemptions are then taken from the transfer agent's dealing file and priced at the signed-off NAV.

Part of the Asset Management and Full Service Editions; implemented with or without the Transfer Agency System. Earlier documentation refers to the Fund Management area as SIAP.

Modules

Code	Module	What it does	Screens	Page
FM-01	**Funds and Mandates**	Mutual funds (KIK) and discretionary mandates (KPD), from set-up and governed release to a full operating record.	1	119
FM-02	**Portfolio Construction and Simulation**	Target allocation, stress scenarios, Monte Carlo and optimisation on a fund's book, producing draft orders.	1	122
FM-03	**Instrument Master**	Security master for deposits, government and corporate debt, shares, rights, warrants and options.	9	124
FM-04	**Investment Policies and Portfolio Models**	Versioned rule sets built on POJK foundations, and strategic allocation models with drift bands.	2	127
FM-05	**Investment Compliance Monitoring**	Every fund and mandate measured against its policy, with a managed breach register and pre-trade refusals.	1	130

Code	Module	What it does	Screens	Page
FM-06	**Benchmarks**	The benchmark master funds, mandates and models are measured against, including composites.	1	132
FM-07	**Firm Portfolio and Holdings**	All funds and mandates as one book: AUM, performance, look-through holdings, exposures and liquidity.	1	134
FM-08	**Trade Order Management**	Fund-level dealing: STP and manual orders with pre-trade compliance, and capture and booking of done deals.	1	136
FM-09	**Deposits and Placements**	The funds' time deposits: placements, accrual, counterparty exposure, maturity instructions and rollovers.	1	140
FM-10	**Fund Settlement and Transactions**	Trade settlement against custodian evidence, and the fund transaction register with governed amendment and reversal.	2	142
FM-11	**Capital Movements**	Fund unit issue and cancellation at the signed-off NAV, from the transfer agent file or the platform register.	1	145
FM-12	**Corporate Actions and Income Distribution**	Servicing events on fund holdings, and declaration and payment of fund distributions.	2	147
FM-13	**Daily Valuation and Accruals**	Firm-wide valuation: accruals, amortisation, fees and mark to market against accepted prices.	1	150
FM-14	**NAV and Custodian Reconciliation**	Shadow NAV calculation and sign-off, official NAV intake and break resolution against the custodian bank.	1	153
FM-15	**Fund Accounting and General Ledger**	Double-entry fund ledger driven by configurable posting rules, on a versioned chart, with ERP export.	4	156
FM-16	**Daily Readiness and Close**	The day's close checklist for every fund and mandate, ending in a versioned, locked accounting day.	1	159
FM-17	**Fund Reporting**	Daily transaction log, daily NAV report and balance sheet, read from the same records as the books.	3	162
FM-18	**Cash Management**	Each fund's cash by bank account: posted book cash, cash due over the next seven days and the custodian's figure.	1	164

Fund Management System, product and instrument universe

Fund investment universe

The instruments a fund or mandate can hold and deal through the Fund Management System. The dealing pattern is read from the instrument, never chosen, so every order carries the right quantity, price basis, charges, counterparties and settlement.

Instrument	How the fund deals or manages it	Settlement
Time deposits	Placement with a bank at an agreed rate and tenor; maturity instructions, rollover and early break. FM-09	Cash transfer on the value date
Government securities	Quote and deal: nominal at a clean price per 100 with accrued interest on top. FM-08	Delivery versus payment on the security's settlement cycle
Corporate bonds and sukuk	Quote and deal: nominal at a clean price per 100 with accrued interest on top. FM-08	Delivery versus payment on the security's settlement cycle
Common shares	Exchange execution through a broker in whole lots, at market or limit, as a single, VWAP, TWAP or sliced order. FM-08	Delivery versus payment, two business days by default
Preferred shares	Exchange execution through a broker, as for common shares. FM-08	Delivery versus payment
Rights and warrants	Exchange execution; rights arising from a rights issue are elected and booked as corporate actions. FM-08	Delivery versus payment
Listed options	Registered with their contract terms and dealt through exchange execution. FM-08	Delivery versus payment
Exchange traded funds	Exchange execution through a broker, as for shares. FM-08	Delivery versus payment
Gold exchange traded funds	Exchange execution through a broker, as for shares. FM-08	Delivery versus payment

Instrument	How the fund deals or manages it	Settlement
Mutual funds (KIK)	Set up, released, invested, valued and accounted for as a fund with its own book and NAV. FM-01	Not applicable
Discretionary mandates (KPD)	Set up and managed as a portfolio book with its own investment policy. FM-01	Not applicable

How the fund book deals

Exchange execution

Shares, preferred shares, rights, warrants, options and ETFs, executed through a broker in whole lots at market or within a limit; fills may arrive in pieces and orders can be worked as VWAP, TWAP or slices.

Quote and deal

Government and corporate debt dealt over the counter on a dealer's quote: nominal at a clean price per 100, with accrued interest settled on top; the dealer's confirmation is the execution.

Placement

Deposits placed with a counterparty bank at an agreed rate to an agreed maturity; the bank's advice confirms the placement and maturity is a servicing event.

Charges

Brokerage and sales levy on equities and a transaction fee on fixed income, computed before submission, with accrued interest shown separately as part of the cash leg.

Settlement

Delivery versus payment for securities on each instrument's settlement cycle, and cash transfer for placements, confirmed against the custodian's evidence.

Valuation and servicing

Every holding is valued by its method and source each day, and its dividends, coupons, rights, redemptions and maturities are serviced as events.

FM-01 Fund Management System

Funds and Mandates

The register of every mutual fund and discretionary mandate the firm manages. A product is created as a short draft, completed in a versioned set-up workspace, released under approval, and then operated from a record showing its book, performance, limits, valuation and history.

Business use	Used to launch funds and mandates, set their share class, dealing, fee and distribution terms, control product changes through versions, and review fund performance and risk.
Screen	**Funds and Mandates** Fund Management › Managed Products

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
18	1	1

Capabilities

18 capabilities

Capability	What it does
Register and launch	
Funds and mandates register	Lists every fund and mandate with its type, category, portfolio manager, set-up state, AUM, daily and year-to-date return, limit status and NAV status, filtered by type, category, lifecycle or manager.
New product	Creates a product in guided steps covering identity, legal structure and parties, investment policy and benchmark, valuation, custody accounts, fees, documents and identifiers, and review.
Policy assignment	Assigns a suitable investment policy, or creates one without leaving the new product flow.
Set-up workspace	
Draft, then set-up	Creates a draft from its identity, custodian and, for a mandate, the client and signed agreement. The set-up workspace then lists the sections the product needs, each with its owner team and state, and every required item links to the control that resolves it. Work saves as it is done.
Readiness	Counts each required item once, separately from sections still to confirm, and marks each as a regulation, a contract or prospectus term, or institution policy. Optional items are kept apart.

Capability	What it does
Share classes	Sets each class's eligibility, launch date, income treatment, precision, class fees, closure to new money and a class risk override with evidence.
Dealing terms	Sets the dealing frequency, cut-off and time zone, calendar, pricing basis, settlement cycles, redemption gate and minimum redemption.
Fees and charges	Sets subscription, redemption, switching, transfer, management, custodian, distribution, performance and operating fees. Each can be flat, tiered, progressive or by holding period, with split recipients.
Distribution and availability	Sets income as accumulating, cash, reinvested or investor-elected, and availability by channel, selling agent, segment, risk profile and geography.
Registry, valuation and accounting	Sets cash accounts, lot method, statements, valuation point, price source priority, stale price limit, fee accrual, class expense allocation, NAV rounding and custodian tolerance.
Conditional requirements	A KIK fund requires its OJK effective statement, contract, prospectus and S-INVEST product and class registrations. A mandate requires its client agreement, a custody agreement and the Rp5 billion minimum. A sharia fund requires a sharia opinion and control.
Dry-run simulations	Simulates dealing dates, minimums, charges, the distribution option and class allocation. A dealing-dates run within thirty days is required before release as the documented test of a new product; the others are optional.
Governed release	Submits a version with an effective date and reason for a second person to approve. The version activates on its date and the previous version is retained.
Fund record	
Overview	Shows the AUM bridge from opening to closing through result, subscriptions, switches and redemptions, with NAV history, allocation, exposures and liquidity.
Holdings	Lists positions with cost, price, value, accrued interest, weight, realised and unrealised results and price freshness.
Performance and analytics	Shows time-weighted return against benchmark, with volatility, beta, tracking error, information ratio and drawdown.
Risk and limits	Shows each policy rule with its headroom in points of net assets and in money, linked to the breach register.
Valuation and history	Shows NAV history, valuation runs and triggers, documents, activity and an attribute-level version history.

Workflows

Launching a fund

1. Save a draft with the product's identity and custodian.
2. Complete the set-up sections until nothing required is outstanding.
3. Run the dealing-dates check.
4. Submit for approval with an effective date.
5. Apply the approved version, and the fund becomes active.

Integrations and dependencies

Works with	How
FM-04 Investment Policies and Portfolio Models Fund Management System	Each product is held to its investment policy.
FM-02 Portfolio Construction and Simulation Fund Management System	Portfolio construction works on the fund's book.
FM-06 Benchmarks Fund Management System	The benchmark comes from the benchmark master.
FN-02 Party and Counterparty Master Core Platform Foundation	Custodian banks and mandate clients come from the party and counterparty master.
FN-07 Integration Management Core Platform Foundation	KSEI, S-INVEST and custodian codes are held as external mappings.

FM-02 Fund Management System

Portfolio Construction and Simulation

A workspace on each fund's book for testing changes before they are made: the target allocation against mandate ranges, stress scenarios, simulated outcomes and optimisation. Nothing is written to the book; proposed trades become draft trade orders that follow the normal checks and approval.

Business use	Used to construct portfolios, analyse them under scenarios and stress, and optimise them.
Screen	**Funds and Mandates** Fund Management › Managed Products

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
5	1	1

Capabilities

5 capabilities

Capability	What it does
Target allocation	Shows the current portfolio and a target allocation against the mandate's ranges.
Scenario analysis	Applies an equity shock, yield shift, credit spread, liquidity call or combined stress, and shows the effect on net assets, duration, drawdown and limits.
Monte Carlo simulation	Simulates outcomes from a horizon, number of runs, expected return and volatility, and shows percentiles and representative paths.
Optimisation	Optimises for minimum variance, target return or improved risk-adjusted return, within minimum cash and maximum single-holding constraints.
Proposed trades	Lists the trades that reach the target and raises them as draft trade orders.

Workflows

Rebalancing a fund

1. Set the target allocation within the mandate ranges.
2. Test it under stress and simulation.
3. Optimise within the constraints.
4. Raise the proposed trades as draft orders for checks and approval.

Integrations and dependencies

Works with	How
FM-01 Funds and Mandates Fund Management System	Opens from the fund record.
FM-08 Trade Order Management Fund Management System	Proposed trades become draft trade orders.
FM-04 Investment Policies and Portfolio Models Fund Management System	Limits after a scenario are measured against the policy.

FM-03 Fund Management System

Instrument Master

The master of every instrument the funds may hold, with the terms each asset class needs for dealing, pricing, accrual and settlement. Instruments are registered in guided steps, from an exchange or bond pricing security master or by hand.

Business use

Used to maintain the security master, keep deposit programme rate boards, and onboard instruments for dealing.

Capabilities	Screens	Workflows
6	9	1

Capabilities

6 capabilities

Capability	What it does
All instruments	Lists every instrument by asset class with columns for each. Equities show exchange, sector and price, debt shows coupon, maturity, rating, yield and duration, and money market shows counterparty and rate.
Class registers	Lists time deposits, government securities, corporate bonds, common and preferred shares, rights, warrants and options in separate registers, each with its own filters.
Instrument record	Shows the terms for the instrument's type, its price history, the funds that hold it and activity.

Capability	What it does
Deposit programmes	Holds each bank's tenor and rate board, minimum and increment, permitted maturity instructions, break terms and deposit insurance limit.
Registration	Registers an instrument in steps covering source, identity, terms, pricing and settlement, and review.
Security master import	Takes terms from the IDX (equities) or PHEI (debt) security master and keeps the lineage on the record. The security master feed is simulated in this version.

Workflows

Registering a bond

1. Select the PHEI source or enter the terms.
2. Confirm identity, coupon, day count and maturity.
3. Set the pricing method and settlement cycle.
4. Register the bond, which can then be dealt and valued.

Integrations and dependencies

Works with	How
FM-08 Trade Order Management Fund Management System	Trade orders deal registered instruments.

FN-04 Prices and Market Data Core Platform Foundation	Prices attach to instruments.
IDX and PHEI security masters Outside system	Instrument terms are imported from them; the feed is simulated in this version.

FM-04 Fund Management System

Investment Policies and Portfolio Models

The rules each fund and mandate is held to. Product policies are built on regulatory foundations that cannot be loosened, can hold a fund to a strategic allocation with drift bands, and are versioned so every product following a policy adopts the new version from its effective date.

Business use	Used to manage investment restrictions, set regulatory limit baselines and define strategic asset allocation.
Screens	**Investment Policies** Fund Management › Managed Products **Portfolio Models** Fund Management › Managed Products

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
10	2	1

Capabilities

10 capabilities

Capability	What it does
Policies	
Product policies and foundations	Lists the product policies assigned to funds, and the foundations that carry the regulation they cite.
Regulatory foundations	Holds the POJK 23/POJK.04/2016 single party, portfolio, money market, fixed income, equity and balanced fund limits, and POJK 33/POJK.04/2019 sharia eligibility.
Policy builder	Starts a policy from a preset or from nothing, selects foundations, links a portfolio model and adds the policy's own rules.
Foundation precedence	Copies foundation rules in with their origin. A looser product rule is flagged and the stricter rule continues to apply.
Rule types	Provides 22 rule types across allocation, eligibility, characteristics (sharia, rating, maturity, duration, foreign exposure), concentration (issuer, instrument, sector, top holdings), issuers and liquidity.
Rule source	Records whether each rule derives from regulation, prospectus, mandate or internal policy, with a warning threshold for near-limit status.
Versioning	Saves a revision as the next version with a reason. Products follow the policy by key and adopt it from its effective date.

Capability	What it does
Portfolio models	
Strategic allocation models	Sets a target, minimum and maximum per asset class for a risk profile and horizon, with expected return, volatility, Sharpe and VaR.
Drift bands	Lets a policy use the model's own bands or a uniform tolerance either side of each target, and generates strategic allocation band rules from them.
Model governance	Publishes, revises and retires models. A model in use cannot be retired.

Workflows

Building a product policy

1. Select the regulatory foundations the product is subject to.
2. Link a portfolio model and choose its drift bands.
3. Add the product's own prospectus or mandate rules.
4. Save and assign it to one or more funds.

Integrations and dependencies

Works with	How
FM-01 Funds and Mandates Fund Management System	Funds and mandates are assigned a product policy.
FM-08 Trade Order Management Fund Management System	Every trade order is checked against the policy.
FM-05 Investment Compliance Monitoring Fund Management System	Compliance monitoring measures each book against its policy.

FM-05 Fund Management System

Investment Compliance Monitoring

Measures each fund and mandate against its investment policy on the book as it stands. Each breach is managed as work with an owner and corrective plan, and the trade orders refused by pre-trade compliance are recorded.

Business use	Used to monitor limits after trading, manage breaches and oversee pre-trade compliance.
Screen	Portfolio Compliance Monitoring Compliance and Risk › Oversight

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
5	1	1

Capabilities

5 capabilities

Capability	What it does
Limit measurement	Measures every fund and mandate against its investment policy, with net assets and near-limit and breach counts.
Breach register	Records each breach with its rule, days open, owner, corrective plan and status. Breaches are raised and resolved automatically as positions change.
Temporary exceptions	Records an exception to a breach until a date, approved by a second person.
Pre-trade refusals	Lists trade orders refused by pre-trade compliance, with the rule and reason.
Incident link	Records a breach as an incident in the incident register.

Workflows

Managing a limit breach

1. The breach is raised when a position crosses its limit.
2. An owner takes it with the cause and a corrective plan.
3. Request a temporary exception if the breach must stand.
4. The breach resolves when the position returns within the limit.

Integrations and dependencies

Works with	How
FM-04 Investment Policies and Portfolio Models Fund Management System	Limits come from each book's investment policy.
FM-08 Trade Order Management Fund Management System	Pre-trade refusals come from trade orders.
FN-08 Compliance Oversight and Incidents Core Platform Foundation	Breaches are counted on the compliance dashboard and can become incidents.

FM-06 Fund Management System

Benchmarks

Maintains the market indices, uploaded series and composite benchmarks that funds, mandates and portfolio models are measured against, with history, analytics and governed changes.

Business use: Used to maintain benchmarks and to build composite and mandate benchmarks.

Screen: Market Benchmarks
Instruments and Prices › Prices and Market Data

Included in
Asset Management and Full Service Editions

Capabilities	Screens	Workflows
6	1	1

Capabilities

6 capabilities

Capability	What it does
Benchmark master	Lists market indices, uploaded series and composites with latest level, year-to-date return and data source.
Stepped creation	Creates a benchmark in steps covering kind, source, level check, details and review. It can search the market data service by symbol, upload a CSV or Excel series with line-level checks, or compose a blend.
Composite benchmarks	Blends registered benchmarks by weight, versioned by effective date so history is not rewritten.
Analytics	Shows returns from one month to inception, volatility and maximum drawdown, with the history and data load log.
Usage and retirement	Lists the funds, mandates and models that use a benchmark. A benchmark in use cannot be retired.
Governed changes	Routes creation, updates, level loads and weight revisions through maker-checker. Revised levels retain their before and after values.

Workflows

Building a composite benchmark

1. Choose Composite and add registered benchmarks with their weights.
2. Check the combined levels and returns.
3. Enter the details and submit for approval.
4. Revise weights later from a new effective date, with the reason.

Integrations and dependencies

Works with	How
FM-01 Funds and Mandates Fund Management System	Funds and mandates reference a benchmark.
FM-04 Investment Policies and Portfolio Models Fund Management System	Portfolio models reference a benchmark.
Market data service Outside system	Index history is retrieved from it by symbol on request.

FM-07 Fund Management System

Firm Portfolio and Holdings

Reads every fund and mandate together: assets under management, daily and year-to-date performance, allocation, consolidated issuer exposure, liquidity and the day's work, from the same figures the fund records use.

Business use	Used to oversee investment across the firm, monitor consolidated exposure, and review liquidity and duration.
Screen	Firm Portfolio and Holdings Fund Management › Portfolio Operations

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
5	1	0

Capabilities

5 capabilities

Capability	What it does
Firm overview	Shows AUM, today's and year-to-date performance, cash, close blockers, firm allocation and the largest consolidated issuer exposures.
Needs attention	Lists close blockers, pending approvals, unexecuted orders, stale prices and draft orders that failed their checks.
Portfolios	Lists each book's AUM and share, returns, excess return, asset split, limit status and valuation state.
Look-through holdings	Lists every instrument across all books with value, share of AUM, number of books, largest holder and price quality.
Analytics	Shows AUM indexed to 100, value-weighted yield and duration, the AUM and flows bridge, a liquidity ladder, contribution by portfolio and issuer concentration.

Integrations and dependencies

Works with	How
FM-01 Funds and Mandates Fund Management System	Reads the same per-fund overviews the fund records use.
FM-05 Investment Compliance Monitoring Fund Management System	Reads each book's limit status.
FM-16 Daily Readiness and Close Fund Management System	Close blockers are shown as work.

FM-08 Fund Management System

Trade Order Management

The fund dealing desk. Orders are raised in guided steps or by batch, checked against the investment policy and cash at submission, approval and release, authorised by a second person, executed, booked and settled. Deals executed outside the platform are received, validated and booked to the same book so the shadow NAV remains complete.

Business use	Used to originate, authorise and book trade orders, apply pre-trade compliance, execute straight through or manually, and capture and book done deals.
Screen	Trade Orders Fund Management › Portfolio Operations

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
19	1	2

Capabilities

19 capabilities

Capability	What it does
Instructions (STP and manual)	
New trade order	Raises an order in guided steps covering fund and instrument, intent and price, terms and settlement, charges and checks, and review.
Equity execution	Takes market or limit orders for the day, good till cancelled or good till date, with single, VWAP, TWAP or sliced execution.
Bonds and placements	Deals bonds at a clean price and quoted yield. A placement takes its tenor from the bank's rate board, with the agreed rate and a maturity instruction.
Impact before submission	Shows cash, net assets, position, weight, issuer exposure, duration and yield before and after, and the journal booking will post.
Processing paths	Routes orders to STP, manual execution or done deal capture by fund, deal source or asset class, versioned under Workflow and Approval Policies.
Batch upload	Accepts a template with the firm's own codes in CSV or Excel, returns each row as ready, warning or error, and provides a corrections file.

Capability	What it does
Register as of	Shows every order as it stood at the end of a past date.
Controls	
Pre-trade compliance	Checks each order at submission, approval and release on the book as it stands. A cash shortfall or a policy breach refuses the order.
Authorisation	Approves, returns or rejects an order with a reason, recorded with the configuration in force.
Amendment and cancellation	An amended approved order returns to draft for fresh checks and decision. Cancellation requires a reason.
Order lifecycle	Tracks each order through draft and checks, approval, execution, booking, settlement and closed, with partial fills and automatic booking once filled.
Done deals (non-STP)	
Record done deal	Records a done deal through the same guided steps, with executed price, time, deal reference and evidence.
Deal files	Receives deal files in the generic template or an OMS layout, with column maps, aliases and duplicate detection by reference and by file.
Deal validation	Checks each deal for an unmapped fund, instrument or counterparty, locked dates, duplicates, fees and accrued interest outside tolerance, insufficient cash or holdings and new limit breaches.
Repair and review	Repairs a row while keeping its original values, checks it again, and has a second person approve booking. Cash and holding shortfalls cannot be overridden.
Deal stages	Tracks each deal as needs a person, booked, settled or rejected. A booked deal returns for attention three business days before settlement.
Booking	
Trade booking	Books the transaction, updates position and cost, records the realised result on sales, and posts purchase, sale, placement and accrued interest journals on the trade date.
Settlement obligation	Raises a settlement for every booking, and opens the deposit for a placement.
Revaluation	Revalues the book as soon as a trade is booked.

Workflows

An STP equity order

1. Raise the order, and it passes pre-trade compliance.
2. A second person authorises it.
3. It is released to the broker gateway and acknowledged.
4. Fills arrive, the order is booked and the book is revalued.
5. The trade settles against the custodian's confirmation.

A done deal

1. Record the deal or receive it in a deal file.
2. Validation passes, or the row is repaired and checked again.
3. A second person approves booking where required.
4. The deal books and returns for settlement in its due window.

Integrations and dependencies

Works with	How
FM-04 Investment Policies and Portfolio Models Fund Management System	Orders are checked against the fund's investment policy.
FM-10 Fund Settlement and Transactions Fund Management System	Every booking raises a settlement obligation.
FM-13 Daily Valuation and Accruals Fund Management System	A booking revalues the book.
FM-15 Fund Accounting and General Ledger Fund Management System	Bookings post dealing journals.
FM-16 Daily Readiness and Close Fund Management System	Unbooked fills and deals block the close.
FN-06 Workflow, Approvals and Audit Core Platform Foundation	Trade paths, deal sources and treatments are configured and approved there.
Broker gateway and external OMS Outside system	Gateway acknowledgements and fills are simulated in this version. OMS deals are received as files.

FM-09 Fund Management System

Deposits and Placements

Shows what each fund has placed with which bank, what it earns, when it matures and the instruction for it. Placements are authorised as trade orders, and maturities are redeemed or rolled with the accounting posted for each.

Business use	Used to place money market deposits, monitor counterparty and deposit insurance exposure, redeem or roll over maturing placements, and break placements early.
Screen	**Deposits and Placements** Fund Management › Portfolio Operations

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
5	1	1

Capabilities

5 capabilities

Capability	What it does
Deposit book	Shows principal placed, interest accrued, average rate, maturities within seven days and largest counterparty, and lists placements as maturing, open, instructed or closed.
Counterparty exposure	Shows exposure by bank against deposit insurance (LPS) cover.
Placement record	Shows the terms, day count, interest accrued to date, interest and tax at maturity, net proceeds, bilyet number, accounts and rollover history.
Maturity instructions	Records an instruction to redeem, roll principal, roll principal and interest, or roll part, with a new term and rate. An earlier date is an early break, with its penalty shown first.
Batch maturity	Carries out every instruction due in one step.

Workflows

Rolling a placement

1. Record the instruction to roll at the new rate.
2. At maturity, carry it out.
3. Interest posts net of tax and a successor placement opens.

Integrations and dependencies

Works with	How
FM-08 Trade Order Management Fund Management System	Placements are raised and authorised as trade orders.
FM-03 Instrument Master Fund Management System	Each bank's deposit programme sets tenors, rates and break terms.
FM-15 Fund Accounting and General Ledger Fund Management System	Posts placement, interest and maturity journals.

FM-10 Fund Management System

Fund Settlement and Transactions

Confirms each booked trade's settlement against the custodian's evidence. It also keeps the register of every booked movement in each fund's books, amended or reversed only under approval, with the accounting reversed line by line.

Business use	Used to settle trades, manage settlement failures, and correct or reverse transactions.
Screens	**Fund Settlements** Fund Management › Portfolio Operations **Fund Transactions** Fund Management › Portfolio Operations

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
7	2	1

Capabilities

7 capabilities

Capability	What it does
Settlement	
Settlement worklist	Lists every obligation as not due, due soon, due today, overdue on the fund's calendar, failed, settled or cancelled.
Settlement against evidence	Records the settlement date, custodian confirmation reference, cash and quantity, with partial settlement where permitted. Nothing settles on a locked day.
Failure and rescheduling	Records a failure or a new expected date with a reason. Failed settlements block the close by default.
Outstanding settlements export	Exports outstanding obligations as CSV.
Fund transactions	
Transaction register	Lists purchases, sales, funding, accruals, revaluation, dividends, coupons, placement interest, corporate actions, maturities and allocations, each with its journal.

Capability	What it does
Amendment and reversal	Amends quantity, price, fees, counterparty and dates, or reverses a transaction in full, showing the effect on cash, holdings and net assets. A second person approves.
Reversal accounting	Reverses the original and posts the replacement as a new transaction. A change affecting a signed-off NAV date is flagged, not rewritten.

Workflows

Settling a purchase

1. The booking raises the obligation with its expected date.
2. The custodian confirms settlement.
3. Record the date and confirmation reference, and the payable clears against the bank.

Integrations and dependencies

Works with	How
FM-08 Trade Order Management Fund Management System	Every booked trade raises its settlement obligation.
FM-15 Fund Accounting and General Ledger Fund Management System	Posts settlement and reversal journals.
FM-16 Daily Readiness and Close Fund Management System	Failed settlements block the close or are disclosed with it.
FM-18 Cash Management Fund Management System	Open settlements are forecast as cash due, and settled ones post to book cash.
Custodian bank Outside system	Settlement evidence is recorded by users; there is no live custodian feed.

FM-11 Fund Management System

Capital Movements

Records each fund's own unit events: subscriptions, redemptions and switches issued and cancelled at the signed-off NAV of the dealing date, with cash settled against evidence. The units can come from the transfer agent's dealing file, from a figure keyed by hand, or from the platform's own unit registry.

Business use	Used to price fund units, issue and cancel them for subscriptions and redemptions, and take in and compare the transfer agent's files.
Screen	Capital Movements Fund Management › Portfolio Operations

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
5	1	1

Capabilities

5 capabilities

Capability	What it does
Unit events	Records subscriptions, redemptions, switches in and out, and class switches.
Sources	Takes units from the transfer agent dealing file with duplicate detection, from a figure keyed by hand, or by allocation from the platform's unit registry.
Source comparison	Compares the source that does not post by dealing date, as agrees, fee basis or differs.
Pricing at the signed-off NAV	Prices units only at the dealing date's signed-off NAV. A sender's NAV outside tolerance becomes an exception.
Cash settlement	Settles money in and out against evidence, partially where required.

Workflows

Pricing a subscription

1. The transfer agent's dealing file is received, or the unit registry allots.
2. The dealing date's shadow NAV is signed off.
3. Units are issued at that NAV and the receivable is raised.
4. The money is received and settled against evidence.

Integrations and dependencies

Works with	How
FM-14 NAV and Custodian Reconciliation Fund Management System	Movements are priced only at a signed-off NAV.
TA-06 Unit Registry Transfer Agency System	Where the fund posts units from the platform, allotments from the unit registry become capital movements.
FM-15 Fund Accounting and General Ledger Fund Management System	Posts unit allocation and cash journals.
FM-16 Daily Readiness and Close Fund Management System	Movements in exception block the lock.
FM-18 Cash Management Fund Management System	Movements still to settle are forecast as cash due in and out.
Transfer agent Outside system	Dealing files are uploaded; there is no live connection.

FM-12 Fund Management System

Corporate Actions and Income Distribution

Services the events on what the funds hold, from dividends and coupons to rights and maturities. It also declares and pays each fund's own distributions to its unit holders in cash or units, checked against distributable income.

Business use	Used to service corporate actions, collect income, declare and pay fund distributions, and apply withholding tax.
Screens	**Instrument Events** Instruments and Prices › Prices and Market Data **Income Distribution** Fund Management › Managed Products

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
7	2	1

Capabilities

7 capabilities

Capability	What it does
Instrument events	
Event families	Covers dividends, stock dividends, bonuses, splits and rights; coupons, amortisation and redemptions; placement interest, maturity and rollover; and IPO and bond allocations.
Event work queue	Lists events as due soon, action required, pending approval or completed, by family and fund.
Elections and booking	Records an election with its reason, approves it, books the event and confirms it against the custodian.
Fund distributions	
Declaration	Declares a cash dividend, unit dividend or investor-elected distribution for a class, with the amount per unit, record, ex and payment dates and announcement reference.
Stage checks	Checks dates, duplicates, distributable income from the ledger excluding unrealised gains, cash, the minimum cash rule, reinvestment NAV, payout accounts and a journal dry run.

Capability	What it does
Holder payment	Fixes named holders from the register at the record date and pays them in cash or reinvested units, with withholding tax. The remainder of the class is paid through the registrar's run.
Governed steps	Routes declaration, payment and withdrawal through maker-checker. The ex-date is booked directly.

Workflows

Paying a distribution

1. Declare the distribution, and a second person approves it.
2. On the ex-date the payable is booked and the NAV goes ex.
3. On the payment date, pay in cash or reinvest in units.

Integrations and dependencies

Works with	How
FM-15 Fund Accounting and General Ledger Fund Management System	Posts income journals and journals for distributions declared, paid and reinvested.
TA-06 Unit Registry Transfer Agency System	Holders are fixed from the unit registry.
FM-16 Daily Readiness and Close Fund Management System	A distribution gone ex and not booked blocks the close.

By line of business

- In Asset Management the servicing screen is named Instrument Events.

FM-13 Fund Management System

Daily Valuation and Accruals

Posts each book's daily income and expense and marks it to market against the day's accepted prices, producing the valuation the shadow NAV is calculated from. Price quality, carried-forward prices and corrections are controlled and recorded.

Business use	Used to value books daily, accrue interest, coupons, placement interest and fees, amortise premium and discount, handle price exceptions and valuation corrections, and monitor maturities.
Screen	Daily Accrual and Valuation Fund Management › Valuation and Control

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
15	1	1

Capabilities

15 capabilities

Capability	What it does
Valuation job	
Revalue all portfolios	Runs one firm-wide job that carries prices forward where policy allows, posts interest accrual, amortisation and fee accrual, then marks each book to market.
Per-book outcome	Shows each book's outcome as completed, completed with exceptions, blocked or failed, with what was posted and why anything was withheld.
Close schedule and policy	Sets the scheduled run time and price cut-off, and whether a missing price blocks or is carried forward and a stale price blocks or completes with an exception.
Phase view	Shows each book's state across revaluation, shadow NAV, reconciliation and sign-off.
Run history	Lists recent jobs with trigger, outcome counts and who ran them.

Capability	What it does
Income and expense	
Interest accrual	Posts daily accrual as the difference to the ledger so a rerun never double counts, and releases it when the coupon or maturity is received.
Amortisation	Amortises premium and discount on amortised cost holdings by the effective interest or straight line method, with a per-holding schedule.
Fee accrual	Accrues management, custodian, audit and operating fees on a percentage of the previous day's NAV or a fixed amount, with ACT/365, ACT/360 or 30/360 day counts.
Maturities	Lists holdings maturing within 30 days as due, overdue or processed, linked to the servicing event.
Prices and corrections	
Price coverage	Shows each book's usable, same-day, carried forward, stale and missing prices, with the next action.
Price quality	Marks each price as fresh, stale, missing or overridden from its source and age. An override names the price it replaces.
Accept the previous close	Carries a price forward with a reason, recorded as an override.
Valuation corrections	Records a corrected price with source and reason, previews its effect on net assets and NAV per unit, and on approval supersedes the run with a new version.
Restatement guard	A correction to a signed-off NAV date posts nothing and is flagged for restatement.
Multi-currency holdings	A holding in another currency requires the day's FX rate, and a missing or stale rate blocks the close.

Workflows

Daily valuation

1. Prices are received from market data, pricing agencies or counterparties, or entered.
2. The valuation job runs on schedule or on demand.
3. Accruals, amortisation and fees post and each book is marked to market.
4. Exceptions are resolved by carrying forward, correcting or awaiting the price.

Integrations and dependencies

Works with	How
FN-04 Prices and Market Data Core Platform Foundation	Reads accepted prices and FX rates.
FM-14 NAV and Custodian Reconciliation Fund Management System	Produces the valuation the shadow NAV is calculated from.
FM-15 Fund Accounting and General Ledger Fund Management System	Posts accrual, amortisation and mark-to-market journals.
FM-16 Daily Readiness and Close Fund Management System	Valuation readiness is part of the book ready milestone.

FM-14 Fund Management System

NAV and Custodian Reconciliation

The investment manager calculates and signs off its own shadow NAV, then reconciles it to the custodian bank's official NAV. Differences are classified, owned and resolved under maker-checker, and the two sign-offs remain separate attestations.

Business use	Used to calculate and sign off the shadow NAV per fund and share class, take in the official NAV, and reconcile the two and resolve breaks.
Screen	NAV and Reconciliation Fund Management › Valuation and Control

Included in
Asset Management and Full Service Editions

Capabilities	Screens	Workflows
12	1	1

Capabilities

12 capabilities

Capability	What it does
Shadow NAV	
NAV calculation	Calculates the NAV from the valuation run with the day's own dealing taken back out. Calculation is refused while any readiness item blocks.
Share classes	Apportions common net assets across classes, each bearing its own fees, with a NAV per unit per class.
NAV bridge	Shows investments at fair value, cash, accrued income and receivables, less payables, accrued fees and tax, with the movement from the previous close.
Sign-off	Records the sign-off, which is refused while a position is unpriced or a readiness item needs attention. The signed figure enters NAV history with the benchmark level.
NAV history	Lists recent NAV records and any restated figures, retained exactly as signed.

Capability	What it does
Custodian reconciliation	
Official NAV intake	Takes the custodian's figure keyed by hand or from an uploaded CSV or Excel NAV summary with fund and class lines, each accepted or declined with a reason.
Versioned official figures	A resent identical figure changes nothing. A revised figure becomes a new version and withdraws any earlier sign-off.
Comparison levels	Compares fund totals and share class figures and, where a full custodian statement is available, cash, accruals, tax and each position.
Tolerances	Applies a basis-point tolerance on net assets and exact matching on NAV per unit and units. Breaks within tolerance remain visible.
Break management	Classifies each break (timing, price, quantity, FX, cash, accrual, fee, tax, corporate action, unit registry, rounding), assigns it and records comments.
Resolution with posting	Proposes a resolution showing what would remain. On approval, a fee, tax, accrual, cash, unit or valuation adjustment posts its own journal.
Reconciliation sign-off	Signs off the reconciliation as matched, within tolerance, or with differences accepted with a reason.

Workflows

Striking and reconciling the NAV

1. Calculate the shadow NAV from the day's valuation.
2. Sign off the shadow NAV.
3. Receive the custodian's official NAV, keyed or by file.
4. Resolve breaks under maker-checker.
5. Sign off the reconciliation.

Integrations and dependencies

Works with	How
FM-13 Daily Valuation and Accruals Fund Management System	Requires the day's valuation run.
FM-15 Fund Accounting and General Ledger Fund Management System	Resolution adjustments post reconciliation journals.
FM-11 Capital Movements Fund Management System	Capital movements are priced at the signed-off NAV.
FM-16 Daily Readiness and Close Fund Management System	Both sign-offs are close milestones.
Custodian bank Outside system	The official NAV is keyed or uploaded as a NAV summary file; there is no live custodian feed.

FM-15 Fund Management System

Fund Accounting and General Ledger

Every business event posts a balanced journal to the fund's ledger through configurable journal scenarios, on a versioned chart of accounts kept under the selected accounting standard. Journals are never edited: each traces to the record that raised it, and corrections post as reversals.

Business use

Used to keep each fund's general ledger and trial balance, configure posting rules, maintain the chart of accounts under PSAK or IFRS, track payables and receivables, and export journals to the corporate ERP.

Capabilities	Screens	Workflows
13	4	1

Capabilities

13 capabilities

Capability	What it does
Journals	
Journal entries	Lists every posting with its lines, the event that raised it and a trail to the trade, order, valuation run, settlement or other source record.
Search and filter	Filters journals by reference, account, fund, family (dealing, settlement, investor dealing, income, amortisation, valuation, expenses, maturity, distributions) and date.
Trial balance	Shows each fund's trial balance by account, with a balance check and access to each account's entries.
Corrections by reversal	An amended or reversed transaction posts a line-by-line reversal and a replacement. No journal is edited.
Posting rules	
Journal scenarios	Defines 33 scenarios across 31 business events, each setting which accounts move, on which side and with which figure.

Capability	What it does
Worked example	Shows what each scenario posts on a worked example, with a check that debits and credits agree.
Scenario versions	Drafts new scenarios and versions with a reason, approved by a second person.
Standards compliance	Tags scenarios by the accounting standard edition they comply with, and warns where an event has no compliant scenario.
Chart of accounts	
Fund chart	Holds 95 accounts across assets, liabilities, net assets attributable to unit holders, income and expenses, each citing its governing standard.
Accounting standards	Applies PSAK 2024, PSAK 2017 (PSAK 71), PSAK 2014 (PSAK 55) or IFRS, and sets debt measurement, amortisation method and trade or settlement date recognition.
Chart versions	Drafts, edits or bulk uploads accounts from CSV or Excel, validates them and approves them under maker-checker. Journals retain the version they were posted under.
Open items and ERP	
Payables and receivables	Lists item by item what each fund is owed and owes, covering settlement, subscription, redemption, income, distribution, fee and tax items, with due dates and overdue status.
Export to Acumatica	Checks the journals in view (day locked, branch set, accounts mapped, balanced) and sends each once as a journal transaction. The exchange with the tenant is simulated in this version.

Workflows

From event to ledger

1. A business event is recorded: a trade, settlement, accrual, distribution or capital movement.
2. Its journal scenario builds a balanced journal on the active chart.
3. The journal posts with its provenance and appears in the trial balance.
4. After the day is locked, journals can be exported to Acumatica.

Integrations and dependencies

Works with	How
FM-08 Trade Order Management Fund Management System	Receives dealing journals from trade bookings.
FM-13 Daily Valuation and Accruals Fund Management System	Receives valuation and income journals.
FM-14 NAV and Custodian Reconciliation Fund Management System	Receives reconciliation adjustment journals.
FN-07 Integration Management Core Platform Foundation	Uses the Acumatica connection and account mappings held there.
Acumatica ERP Outside system	Posted journals are exported one way; the tenant's reply is simulated in this version.

FM-16 Fund Management System

Daily Readiness and Close

Shows how far each fund and mandate is from closing the day, what is preventing it and which team must act. The close ends in a locked, versioned accounting day that no later posting can change without a governed reopen.

Business use	Used to close the day, lock accounting days and control periods, follow up custodian NAV reconciliation, and reopen days and restate NAVs under governance.
Screen	Daily Readiness and Close Workspace › My Workspace

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
9	1	1

Capabilities

9 capabilities

Capability	What it does
Close monitoring	
Five milestones per fund	Tracks book ready, shadow NAV signed off, accounting day locked, official NAV received and reconciliation signed off, each with time and user.
Two phases	Splits the close into the accounting close and the custodian reconciliation. A locked day awaiting the custodian is closed for accounting.
Blockers with an owner	Names the team that clears each blocker (dealing desk, middle office, market data, fund accounting, settlements, unit registry, valuation control) and links to where it is worked.
Disclosures	Records items with the close without blocking it: unexecuted instructions, settlements due, distributions due and capital movements awaiting the day's NAV.

Capability	What it does
Lock and reopen	
Lock the accounting day	Locks the day once nothing blocks it. The lock records its version, valuation run, NAV figures, journal count, a fingerprint of the day's journals and the configuration in force.
Posting protection	Once the day is locked, trade booking, settlements, capital movements, deal intake and transaction adjustments dated on or before it are refused.
Governed reopen	Reopens the latest locked day under maker-checker, either as a rerun that keeps the signed NAV or as a restatement that retains the previous figure as restated.
Close history	Lists every locked and reopened version with net assets, lock details, journal fingerprint and reopen reason.
End-of-day summary	Shows each fund's close status, net assets, NAV per unit, change, activity, units in and out and difference to the custodian NAV, and exports it as CSV.

Workflows

Closing the day

1. Book the day's trades, deals, settlements and corporate actions.
2. Run the valuation and resolve price and FX exceptions.
3. Calculate and sign off each shadow NAV.
4. Lock the accounting day.
5. Receive the official NAV and sign off the reconciliation.

Integrations and dependencies

Works with	How
FM-13 Daily Valuation and Accruals Fund Management System	Valuation readiness feeds the book ready milestone.
FM-14 NAV and Custodian Reconciliation Fund Management System	NAV and reconciliation sign-offs are milestones.
FM-08 Trade Order Management Fund Management System	Unbooked fills and deals block the close.
FM-15 Fund Accounting and General Ledger Fund Management System	The lock governs Acumatica export when it is scoped to locked days.

FM-17 Fund Management System

Fund Reporting

The daily reports funds are operated on, read from the records the books are kept in so that no report can disagree with the ledger.

Business use

Used to review the day's dealing and NAVs, and to produce each fund's statement of financial position.

Screens

Daily Transaction Log

Capabilities	Screens	Workflows
4	3	0

Capabilities

4 capabilities

Capability	What it does
Daily transaction log	Lists every purchase and sale booked on a trade date for one or all funds, with price, gross, fees, net, counterparty, custodian-confirmed settlement status and totals.
Daily NAV report	Shows one row per fund with gross assets, liabilities, net assets, units, NAV per unit, daily change, custodian NAV, difference in basis points, and NAV and reconciliation status.
Balance sheet	Shows a fund's statement of financial position between two dates, with opening, change and closing, a reconciliation check and access to any account's ledger.
Period presets	Sets the period to today, month to date, last 30 days or year to date.

Integrations and dependencies

Works with	How
FM-08 Trade Order Management Fund Management System	The transaction log reads booked executions.
FM-14 NAV and Custodian Reconciliation Fund Management System	The NAV report reads NAV records and reconciliation status.
FM-15 Fund Accounting and General Ledger Fund Management System	The balance sheet reads the ledger through the chart.
FN-09 Report Catalogue Core Platform Foundation	The reports are listed in the report catalogue.

FM-18 Fund Management System

Cash Management

Shows each fund's cash by bank account, read from the records that own it rather than kept as a second cash book. Posted book cash, cash still due and the custodian's reported figure are kept apart, so operations can see where every account stands and which one must be topped up before a payment falls due.

Business use	Used to monitor each fund's cash by bank account, forecast what falls due over the next seven days, fund payout accounts before payments leave, and compare book cash with the custodian's statement.
Screen	Cash Management Fund Management › Portfolio Operations

Included in

Asset Management and Full Service Editions

Capabilities	Screens	Workflows
15	1	2

Capabilities

15 capabilities

Capability	What it does
Overview	
Cash bridge	Shows today's book cash, the cash due in and out over the next seven days, and where the balance lands, for the funds in one currency.
Funds and accounts	Lists each fund with its book cash, cash due, lowest projected balance and custodian comparison, and opens into the fund's bank accounts.
Next step	Names the most pressing action for each fund, such as topping up an account that goes short, resolving a failed settlement or chasing overdue items, and links to the screen that resolves it.
Custodian comparison	Compares book cash with the custodian's latest fund-level cash figure on the statement's own date. The custodian's figure is never used in place of book cash.
Currencies kept apart	Shows each currency on its own; amounts in different currencies are never added together.

Capability	What it does
Next seven days	
Daily forecast	Shows each day's cash in, cash out and closing balance for a fund or one of its accounts, and opens each day into the flows that make it up.
Cash path	Charts the closing balance day by day, marking the lowest point and any day that closes below zero.
Expected flows	Takes each flow from the record that owes it: trade settlements, capital movements, distributions, deposit maturities, income and maturity proceeds. Each carries its date, account, certainty and status, and counts once.
Certainty and status	Marks each flow as booked, instructed, scheduled or indicative, and as expected, due today, overdue or failed. A rescheduled flow keeps its contractual date.
Authorized orders	Adds authorized orders that have not yet executed when asked, as a scenario that is never treated as firm cash.
Usable cash	Works out what can be committed today: book cash, less firm payments due, authorized orders and the investment policy's cash floor.
Outside the forecast	Lists what is owed but cannot be placed on a day, such as an accrued fee with no payment date.
Movements	
Cash movements	Lists every posting to a fund's cash accounts, newest first, with its type, effective date, bank account, amount, source record and journal.
Unassigned postings	Shows a posting that names no bank account, such as a reconciliation adjustment, as unassigned instead of spreading it across accounts.
Account transfers	Records a transfer the bank has already made between two of a fund's own accounts, with its evidence. Nothing is sent to the bank and the fund's total cash is unchanged. A transfer to another fund, across currencies or dated in the future is refused.

Workflows

Funding a payout account

1. The forecast shows the distributions account going short on the payment date.
2. The overview names the account to top up.
3. Treasury moves the cash at the bank from the operating account.
4. Record the transfer with its evidence; the account no longer goes short.

Following a settlement into cash

1. A booked sale appears as cash due in on its settlement date.
2. The custodian confirms settlement and it is recorded in Fund Settlements.
3. The flow leaves the forecast, and its posting appears in the movements and in book cash.

Integrations and dependencies

Works with	How
FM-10 Fund Settlement and Transactions Fund Management System	Open settlements are cash due; a settled trade posts to book cash.
FM-11 Capital Movements Fund Management System	Subscriptions and redemptions still to settle are cash due in and out.
FM-12 Corporate Actions and Income Distribution Fund Management System	Distribution payments and income due appear as cash flows on their dates.
FM-09 Deposits and Placements Fund Management System	Placements and maturity proceeds move cash; principal that rolls over does not.
FM-08 Trade Order Management Fund Management System	Authorized orders can be added to the forecast as a scenario.
FM-04 Investment Policies and Portfolio Models Fund Management System	The investment policy sets each fund's cash floor.
FM-14 NAV and Custodian Reconciliation Fund Management System	The custodian's cash figure is compared with book cash.
FM-15 Fund Accounting and General Ledger Fund Management System	Book cash is the balance of the journal lines posted to each cash account.
Bank Outside system	Transfers are recorded after the bank makes them; no instruction is sent and no bank statement is received.

B. Planned capabilities

Capabilities the product reserves a place for but does not yet provide. They are outside the scope of this version and are listed so a requirement can be matched to planned work.

Capability	Module	Description
Offerings and availability	TA-09 Investment Product Shelf Transfer Agency System	Which products are offered to whom, through which channels and when.
Ad hoc report builder	FN-09 Report Catalogue Core Platform Foundation	Build and save reports from the platform's records.
Report runs	FN-09 Report Catalogue Core Platform Foundation	Scheduled report runs with their history and outputs.
Regulatory submissions	FN-09 Report Catalogue Core Platform Foundation	Prepare, approve and track regulatory report submissions.
Policy and rule sets	FN-05 Reference Data, Fees and Taxes Core Platform Foundation	One register for business rule sets shared across modules.
Assignment, mutation and attribution policies	TA-13 Sales Force and Relationship Coverage Transfer Agency System	Configurable rules for client coverage, relationship manager moves and sales attribution.
Document and notification templates	FN-05 Reference Data, Fees and Taxes Core Platform Foundation	Templates for client documents and notifications.
Report configuration	FN-09 Report Catalogue Core Platform Foundation	Report layouts, parameters and distribution.
Configuration releases	FN-06 Workflow, Approvals and Audit Core Platform Foundation	Configuration changes bundled into a release approved and applied together.
Campaign reward payment and messaging	TA-16 Campaigns and Referral Programs Transfer Agency System	Calculation and payment of qualifying rewards and delivery of campaign messages.

Capability	Module	Description
Bancassurance product set-up	TA-09 Investment Product Shelf Transfer Agency System	Set-up of unit-linked insurance products with their insurers.
Manual journals	FM-15 Fund Accounting and General Ledger Fund Management System	Hand-keyed journals under approval, alongside event-driven postings.

C. Glossary

Terms used in this catalog, including the Indonesian market and regulatory terms the platform works with, and earlier internal names kept for traceability.

Term	Meaning
AID	Account for holding government bonds, opened through S-INVEST.
APERD	Agen Penjual Efek Reksa Dana: a selling agent licensed to distribute mutual funds.
Bank Kustodian	The custodian bank that holds a fund's assets and publishes its official NAV.
Bilyet	The certificate a bank issues for a time deposit.
CDD and EDD	Customer due diligence, and enhanced due diligence for higher-risk parties.
CIF	The customer information file number in core banking.
Done deal	A trade executed outside the platform, recorded and booked without an order flow (non-STP).
DTTOT	Daftar Terduga Teroris dan Organisasi Teroris: the Indonesian list of suspected terrorists and terrorist organisations.
goAML	The system PPATK uses to receive suspicious and threshold transaction reports.
IFUA	Investor Fund Unit Account: the S-INVEST account for holding mutual fund units.
IPS	Investment policy statement: an advised client's agreed objectives, constraints and allocation.
KIK	Kontrak Investasi Kolektif: the collective investment contract form of an Indonesian mutual fund.
KPD	Kontrak Pengelolaan Dana: a discretionary mandate managed for a single client.
KSEI	Kustodian Sentral Efek Indonesia, the central securities depository, which operates S-INVEST.
LTKM, LTKT, LTKL	Reports to PPATK of suspicious transactions, cash transactions and foreign transfers.
Maker-checker	Segregation of duties in which one person proposes a change and a different person approves it.

Term	Meaning
NAV	Net asset value. The shadow NAV is the manager's own figure; the official NAV is the custodian bank's.
OJK	Otoritas Jasa Keuangan, the Indonesian financial services authority.
PEP	Politically exposed person.
POJK	Peraturan OJK: a regulation issued by OJK, such as POJK 23/POJK.04/2016 on mutual funds.
PPATK	Pusat Pelaporan dan Analisis Transaksi Keuangan, the Indonesian financial intelligence unit.
PSAK	Pernyataan Standar Akuntansi Keuangan: Indonesian financial accounting standards.
S-INVEST	The KSEI platform for investment account opening, fund dealing and unit balances.
SAA	Strategic asset allocation: the target mix a portfolio is held to, with drift bands.
SID	Single Investor Identification, issued by KSEI.
STP	Straight-through processing: an order routed and executed electronically without re-keying.
SubReg	Sub-registry account for holding corporate bonds.
Unit Registry	The register of a fund's unit holders and their balances, kept by the fund's transfer agent.
WAPERD, WPPE, AAJI	Sales licences for mutual funds, securities and insurance respectively.
Legacy: OMS	Earlier internal name for the order management engine behind investor and fund orders, now part of the Transfer Agency and Fund Management Systems.
Legacy: SIAR	Earlier internal name for the investor registry and transfer agency functions, now the Transfer Agency System.
Legacy: SIAP	Earlier internal name for the fund management area, now the Fund Management System.

D. Version history

Each version of the catalog records the platform as it shipped on its issue date. Module codes are stable across versions, so an institution's required modules carry from one version to the next.

Version	Issued	Changes
0	29 September 2026	First issue. Establishes the product architecture of Core Platform Foundation, three editions and three solution systems, with module codes FN-01 to FN-09, TA-01 to TA-16, WM-01 to WM-08 and FM-01 to FM-18, covering every screen the platform ships.

Scope of this version

Version 0 covers 51 modules with 437 capabilities and 44 workflows, delivered through 98 screens. Every shipped screen is assigned to at least one module for each line of business that has it, every foundation module is deployed to both lines, and every solution system module is deployed to the lines its system serves. Integrations with outside systems are described as the product implements them; where an exchange is simulated rather than connected, the module states it.
